PROFESSIONAL SUMMARY

I'm a Research Engineer based in Bristol with a passion for exploring emerging technologies and solving complex computational problems. After starting my career as a graduate developer, I quickly progressed through various technical roles and now lead research initiatives across multiple domains. I enjoy mentoring junior staff and collaborating with cross-functional teams to drive innovation. When I'm not coding, I'm usually reading about advances in machine learning or contributing to open-source discussions.

WORK EXPERIENCE

Principal Research Engineer

NeuralPath Technologies

www.neuralpath.io

Bristol, United Kingdom

June 2021 - Present

Directed research strategy and innovation roadmap for a team of 24 engineers across three continents, establishing technical vision for next-generation AI infrastructure products.

Designed and implemented proprietary deep learning frameworks that reduced model training time by 60% and published findings at three international conferences.

Managed annual R&D; budget of 2.3 million pounds and coordinated partnerships with five leading academic institutions including Oxford and Cambridge.

Established company-wide best practices for reproducible research and led adoption of containerized deployment pipelines across all development teams.

Mid-Level Software Developer

DataStream Solutions Ltd

www.datastream-sol.co

Bristol, United Kingdom

March 2020 - May 2021

Developed and maintained Python-based data processing pipelines that handled over 500GB of daily telemetry data for telecommunications clients.

Collaborated with the DevOps team to optimize database query performance, achieving 40% reduction in average response times for production systems.

Participated in code reviews and contributed to documentation for internal development standards and API specifications.

Supported three client implementations of custom analytics dashboards, providing technical guidance and troubleshooting throughout deployment phases.

Graduate Software Engineer

Apex Digital Consulting

www.apexdigital.net

Guildford, United Kingdom

September 2018 - February 2020

Built REST APIs using Node.js and Express for various client projects spanning finance, retail, and logistics sectors.

Wrote comprehensive unit and integration tests achieving 85% code coverage using Jest and Mocha testing frameworks.

Assisted in migrating legacy monolithic applications to microservices architecture under supervision of senior architects.

Participated in daily stand-ups and weekly sprint planning sessions while working on a team of four junior developers.

EDUCATION

University of Bristol

Bachelor of Science in Computer Science

Graduated: June 2018

SKILLS

Technical Skills: Python, JavaScript, TypeScript, Java, C++, SQL, MongoDB, PostgreSQL, REST APIs, Git, Docker, Kubernetes, Terraform, ArgoCD, Apache Spark, TensorFlow, PyTorch, Distributed Systems, Machine Learning, Deep Learning, Data Structures, Algorithms, Linux, AWS, Azure, Cloud Computing, CI/CD Pipelines, Microservices Architecture, Software Design Patterns
