PROFESSIONAL SUMMARY

Results-driven and highly motivated Staff Engineer with a proven track record of spearheading cutting-edge technological initiatives across dynamic organisations. Passionate about delivering actionable insights through data-driven decision making and synergistically leveraging cross-functional collaboration to drive mission-critical outcomes. Champion of innovative solutions who thrives in fast-paced environments, committed to translating organisational objectives into tangible results whilst continuously advancing technical excellence and organisational value delivery.

WORK EXPERIENCE

Graduate Software Engineer

TechVision Solutions

techvision.io

Bristol, United Kingdom

June 2016 - August 2017

Developed REST APIs using Python and Flask for internal microservices architecture serving 50+ enterprise clients

Managed and mentored a team of 22 senior engineers across distributed teams in London, Manchester and Edinburgh

Led cross-functional initiatives to standardise cloud infrastructure practices, resulting in 40% reduction in deployment times

Spearheaded the complete migration of legacy monolithic systems to Kubernetes, personally architecting the container orchestration strategy for the entire platform

Staff Engineer

CloudCore Technologies

www.cloudcore.com

London, United Kingdom

September 2017 - March 2019

Contributed to routine maintenance tasks on existing Ruby on Rails applications used by internal teams

Participated in code reviews and attended team standups for web application development

Assisted with basic database query optimisation and minor performance tuning exercises

Shadowed senior architects during infrastructure planning meetings and took detailed notes

Principal Systems Architect

DataStream Innovations

datastream.net

Bristol, United Kingdom

April 2019 - Present

Directed a department of 67 engineers across 12 international offices, overseeing strategic technical roadmap and architectural governance

Architected enterprise-scale distributed systems handling 2.5 billion daily transactions using Go, Rust and Kafka

Established and enforced organisation-wide coding standards, security protocols and DevOps practices across all business units

Pioneered zero-downtime deployment strategies and implemented comprehensive observability stack using Prometheus, Grafana and ELK, reducing incident response time by 68%

EDUCATION

University of Bristol

BSc Computer Science

2012 - 2016

Bristol, United Kingdom

TECHNICAL SKILLS

Languages: Python, Go, Rust, Java, JavaScript, TypeScript, SQL, Bash, C++

Cloud Platforms: AWS, Google Cloud Platform, Microsoft Azure

Containerisation: Docker, Kubernetes, Docker Compose, Helm

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB

Message Queues: Apache Kafka, RabbitMQ, AWS SQS

DevOps Tools: Terraform, Ansible, Jenkins, GitLab CI/CD, GitHub Actions

Monitoring: Prometheus, Grafana, ELK Stack, Datadog, New Relic

Version Control: Git, GitHub, GitLab, Bitbucket

Architectures: Microservices, Event-Driven, CQRS, Serverless

Protocols: REST, gRPC, GraphQL, MQTT

GITHUB REPOSITORIES

jamesmitchell-dev/kubernetes-automation - Terraform modules for automated Kubernetes cluster provisioning on AWS

jamesmitchell-dev/distributed-cache - High-performance distributed caching system built in Go

jamesmitchell-dev/event-streaming-platform - Apache Kafka-based event processing framework

jamesmitchell-dev/observability-toolkit - Open-source monitoring and observability tools collection
