PROFESSIONAL SUMMARY

Data scientist with 5 years of experience building predictive models and analytics solutions for e-commerce and fintech companies. I started my career analyzing customer behaviour datasets and have since moved into developing machine learning pipelines that drive business decisions. I'm comfortable working across the full data lifecycle from exploration to production deployment. Outside of work I contribute to open source projects and enjoy mentoring junior analysts who are transitioning into data science roles.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Scala

Machine Learning: Scikit-learn, XGBoost, LightGBM, Neural Networks, Regression Analysis

Data Processing: Pandas, NumPy, PySpark, Apache Spark

Databases: PostgreSQL, MySQL, MongoDB, Redshift

Data Visualization: Tableau, Matplotlib, Seaborn, Plotly

Cloud Platforms: AWS (EC2, S3, Lambda), Google Cloud Platform

DevOps and Infrastructure: Kubernetes, Terraform, ArgoCD, Docker

Version Control: Git, GitHub, GitLab

Statistics: Hypothesis Testing, A/B Testing, Bayesian Inference

WORK EXPERIENCE

Senior Data Scientist

Quantify Analytics Ltd

Leeds, United Kingdom

quantify-analytics.io

January 2022 - Present

Developed and deployed a customer churn prediction model that identified at-risk accounts with 87% accuracy, resulting in retention of GBP 2.4m revenue in the first year

Built an automated feature engineering pipeline in Python that reduced model development time by 35% across five concurrent projects

Led analysis of A/B testing results for pricing experiments, providing statistical validation and business recommendations to the product team

Mentored two junior data scientists on best practices in model validation, experimental design and code documentation

Mid-Level Data Scientist

Fintech Innovations UK

Birmingham, United Kingdom

fintech-innovations.co

June 2020 - December 2021

Constructed fraud detection models using gradient boosting techniques that reduced false positives by 22% compared to the previous rule-based system

Performed exploratory data analysis on transaction patterns across 500k+ daily records using SQL and Spark to uncover spending trends

Designed and executed multiple A/B tests to evaluate changes to recommendation algorithms, communicating findings through Tableau dashboards to stakeholders

Collaborated with backend engineers to implement model predictions as real-time API endpoints serving 10,000+ requests per day

Junior Data Scientist

Consumer Insights Group

Manchester, United Kingdom

consumerinsights.net

August 2018 - May 2020

Analyzed customer survey data and behavioral datasets to identify market segments and inform marketing strategy for three major campaigns

Built regression models in Python to forecast product demand by category and region, achieving 78% forecast accuracy

Created interactive Tableau visualizations and monthly reporting dashboards consumed by senior management and regional teams

Cleaned and validated data from multiple sources including CRM systems, web analytics and third-party data providers to support analysis projects

EDUCATION

BSc Computer Science (Upper Second Class Honours)

University of Manchester

Manchester, United Kingdom

Graduated: June 2018

GITHUB REPOSITORIES

github.com/jmitchell-ds/churn-prediction-model

Customer churn prediction system using XGBoost with feature importance analysis and SHAP explanations. Includes preprocessing pipeline and model evaluation metrics.

github.com/jmitchell-ds/demand-forecasting

Time series forecasting for retail demand using ARIMA and Prophet. Includes cross-validation framework and performance comparison across multiple datasets.

github.com/jmitchell-ds/ab-testing-framework

Python library for A/B test statistical analysis with support for multiple test types, power analysis and sequential testing calculations.

github.com/jmitchell-ds/exploratory-data-analysis-toolkit

Collection of utility functions for exploratory data analysis including distribution analysis, correlation studies and outlier detection methods.
