PROFESSIONAL SUMMARY

Data Engineer with 1 year of hands-on experience building data pipelines and ETL processes. I got into data engineering after realising I preferred solving backend infrastructure problems over frontend work. I'm particularly interested in stream processing and making messy data usable. Outside work I contribute to open source projects and tinker with Kubernetes in my spare time.

TECHNICAL SKILLS

Languages: Python, SQL, Java

Big Data Technologies: Apache Spark, Kafka, Airflow

Data Warehousing: Snowflake, PostgreSQL, Amazon Redshift

Cloud Platforms: AWS (S3, EC2, Lambda, RDS)

Tools & Platforms: Docker, Git, Jenkins, Tableau

Data Formats: JSON, CSV, Parquet, Avro

WORK EXPERIENCE

Data Engineer

Precision Data Systems (Previously known as DataFlow Labs Ltd)

Bristol, UK

August 2023 - Present

Developed and maintained Python-based ETL pipelines processing 50+ GB of daily customer transaction data using Apache Airflow for orchestration

Built automated data validation frameworks in SQL that caught data quality issues before they reached production, reducing downstream errors by 35%

Optimized Spark jobs for processing historical data by implementing partitioning strategies, reducing job runtime from 45 minutes to 12 minutes

Collaborated with analytics team to design star schema for new data mart in Snowflake, enabling faster reporting queries

Junior Data Engineer

TechVenture Solutions

https://www.techventuresolutions.io

London, UK

April 2023 - July 2023

Constructed CSV-to-Redshift pipeline using Python and boto3, processing employee records for HR analytics department

Wrote comprehensive SQL queries to validate 10 million row datasets and document data lineage for compliance purposes

Implemented monitoring alerts for failed jobs using CloudWatch and SNS, reducing incident detection time from hours to minutes

Assisted senior engineers in debugging Kafka consumer lag issues and proposed solution that improved throughput by 20%

Data Engineering Intern

Deloitte

https://www.deloitte.com

London, UK

June 2022 - March 2023

Created documentation and test scripts for existing Spark transformation jobs to improve team onboarding process

Built proof-of-concept pipeline ingesting API data into PostgreSQL, demonstrating feasibility of new data source

Performed exploratory data analysis on 5 datasets using Pandas and generated summary statistics for stakeholder presentations

Shadowed senior engineers during production incidents and learned troubleshooting approaches for distributed systems

EDUCATION

BSc Computer Science with Industrial Experience

University of Bristol

Bristol, UK

Graduated: June 2022

Grade: 2.1 (Upper Second Class Honours)

PUBLIC REPOSITORIES

github.com/jweatherby/spark-etl-templates - Collection of reusable Spark transformation patterns with examples

github.com/jweatherby/airflow-dag-generator - Python CLI tool for auto-generating Airflow DAGs from config files

github.com/jweatherby/data-quality-framework - Lightweight validation library for pandas DataFrames

github.com/jweatherby/kafka-consumer-monitor - Monitoring dashboard for Kafka consumer groups
