PROFESSIONAL SUMMARY

Experienced Principal Engineer with 10 years building scalable infrastructure and leading technical strategy across high-growth organizations. Specialized in cloud architecture, distributed systems, and mentoring engineering teams from startup to enterprise scale. Known for pragmatic problem-solving and establishing best practices that improve reliability and reduce operational overhead. Based in Bristol with a track record of delivering complex projects on time and budget.

WORK EXPERIENCE

Principal Engineer

DataVault Systems

datavalut.io

Bristol, United Kingdom

March 2022 - Present

Led architecture decisions for cloud migration from on-premise to AWS, reducing infrastructure costs by 34 percent. Established infrastructure-as-code standards using Terraform and CloudFormation across 12 engineering teams. Mentored 6 junior and mid-level engineers, with 4 progressing to senior roles within 18 months. Implemented automated CI/CD pipelines using GitHub Actions, reducing deployment time from 45 minutes to 8 minutes.

Senior Infrastructure Engineer

Cornerstone Analytics Ltd

cornerstone-analytics.co.uk

London, United Kingdom

July 2018 - February 2022

Designed and implemented Kubernetes cluster architecture supporting 400+ microservices handling 2 billion requests daily. Rebuilt monitoring and observability stack using Prometheus, Grafana, and ELK, reducing mean time to resolution from 90 minutes to 15 minutes. Led incident response program establishing post-mortems and automation workflows that prevented 12 critical production incidents. Managed budget and vendor relationships for 8 million pounds in cloud infrastructure annually.

Platform Engineer

TechFlow Innovations

techflow.io

Reading, United Kingdom

June 2014 - June 2018

Built internal developer platform serving 40+ engineers, standardizing deployment processes and reducing onboarding time from 3 weeks to 4 days. Implemented GPT-4 API integration for automated documentation generation and code analysis workflows across the platform. Migrated legacy monolithic applications to containerized architecture using Docker and Kubernetes. Established database optimization practices that improved query performance by 67 percent across critical services.

EDUCATION

BSc Computer Science

University of Bristol

Bristol, United Kingdom

2011 - 2014

TECHNICAL SKILLS

Cloud Platforms: AWS, Google Cloud Platform, Azure

Container Orchestration: Kubernetes, Docker, ECS

Infrastructure as Code: Terraform, CloudFormation, Ansible

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Datadog

CI/CD: GitHub Actions, Jenkins, CircleCI

Databases: PostgreSQL, MySQL, MongoDB, Redis

Programming Languages: Python, Go, Java, Bash

Messaging Systems: Kafka, RabbitMQ, SQS

Version Control: Git, GitLab, Bitbucket
