## PROFESSIONAL SUMMARY

Data engineer with 6 years of hands-on experience building scalable data pipelines and warehouse solutions across fintech and e-commerce sectors. I've spent the last few years moving away from pure infrastructure work and toward more strategic data architecture roles, which has been rewarding. I'm particularly interested in optimizing ETL workflows and helping teams make better decisions with their data. Currently based in London and looking to work with organisations solving real data challenges rather than chasing the latest trends.

## WORK EXPERIENCE

Senior Data Engineer

Synapse Data Ltd

London, United Kingdom

synapsedataltd.io

January 2022 - Present

Designed and implemented data lakehouse architecture supporting 2TB daily ingestion across 40+ source systems, reducing query latency by 58 percent through optimized partitioning strategies. Led migration of legacy batch jobs to Apache Spark, improving processing time from 8 hours to 1.5 hours and cutting infrastructure costs by 35 percent. Mentored 3 junior data engineers on software engineering practices including version control, testing frameworks, and code review standards. Implemented uv package management across Python data pipelines, improving development environment consistency and reducing onboarding time by 40 percent.

Data Engineer

ASOS plc

www.asos.com

London, United Kingdom

September 2020 - December 2021

Built and maintained Airflow DAGs orchestrating 150+ daily data pipelines serving analytics and machine learning teams with SLA compliance of 99.2 percent. Designed dimensional schemas in Snowflake to support executive dashboards tracking customer lifetime value, resulting in 25 percent improvement in reporting query performance. Implemented data quality frameworks using Great Expectations, detecting and preventing 92 percent of data anomalies before reaching downstream consumers. Collaborated with analytics engineering team to establish SQL standards and documentation practices, reducing time to insight for business analysts by 45 percent.

Data Engineer

Thomson Reuters

www.thomsonreuters.com

London, United Kingdom

June 2018 - August 2020

Developed Python-based ETL processes ingesting financial market data from 15 external APIs, handling 2 million records daily with 99.9 percent accuracy validation. Implemented GitHub Actions continuous integration pipeline for automated testing and deployment of data workflows across dev and production environments. Created comprehensive monitoring and alerting using Datadog and PagerDuty, reducing mean time to incident resolution

from 4 hours to 25 minutes. Wrote technical documentation for 8 major data pipelines and conducted knowledge transfer sessions with offshore support teams in India.

## EDUCATION

BSc Computer Science

University of Manchester

Manchester, United Kingdom

Graduated 2018

## SKILLS

Data Engineering: Apache Spark, Apache Airflow, dbt, SQL (Snowflake, PostgreSQL, BigQuery), Python (pandas, PySpark), Databricks

Cloud Platforms: Google Cloud Platform, AWS, Azure

Data Warehousing: Snowflake, BigQuery, Redshift, dimensional modelling

Tools and Frameworks: Apache Kafka, Great Expectations, Datadog, Docker, Git, Linux

Soft Skills: Technical mentoring, stakeholder communication, documentation, cross-functional collaboration
