PROFESSIONAL SUMMARY

I'm a DevOps engineer with 8 years of hands-on experience building and maintaining infrastructure for high-traffic applications. I've spent the last five years focusing on Kubernetes orchestration and cloud-native architecture, helping teams move from monolithic deployments to containerized microservices. I genuinely enjoy solving operational problems through automation and have a track record of reducing deployment times by 70% across multiple organizations. I'm based in Cambridge and looking for roles where I can continue working with cutting-edge infrastructure tooling.

WORK EXPERIENCE

Senior DevOps Engineer

Nexus Systems Ltd

Cambridge, United Kingdom

nexus-systems.io

January 2021 - Present

Designed and implemented a multi-region Kubernetes infrastructure supporting 50+ microservices deployed across AWS and Azure, achieving 99.95% uptime for customer-facing applications

Established GitOps workflows using ArgoCD and Flux, reducing manual deployments by 85% and enabling the engineering team to ship code 40 times per day

Built comprehensive monitoring and alerting systems using Prometheus, Grafana, and PagerDuty, reducing mean time to resolution from 2 hours to 15 minutes

Led a team of 3 junior engineers, conducting code reviews on infrastructure-as-code pull requests and mentoring them on Terraform best practices and cloud security

Lead Infrastructure Engineer

Cascade Digital Solutions

London, United Kingdom

cascadedigital.co.net

August 2018 - December 2020

Migrated legacy applications from on-premises data centers to AWS, resulting in 35% reduction in infrastructure costs and improved scalability during peak usage periods

Containerized 12 monolithic applications using Docker and deployed them to a self-managed Kubernetes cluster, reducing deployment time from 4 hours to 8 minutes

Implemented comprehensive CI/CD pipelines using Jenkins and GitLab CI, automating testing, security scanning, and deployments across development, staging, and production environments

Designed disaster recovery and backup strategies, implementing daily automated snapshots and achieving RPO of 1 hour and RTO of 30 minutes across all critical systems

DevOps Engineer

BT Group

Adastral Park, Ipswich, United Kingdom

bt.com

June 2016 - July 2018

Provisioned and maintained Linux servers running enterprise applications, managing configuration changes across 200+ production machines using Ansible and Chef

Implemented ELK stack for centralized logging across distributed systems, processing over 2 million log events daily and enabling faster debugging and troubleshooting

Collaborated with security team to implement container image scanning and vulnerability management, reducing critical vulnerabilities in production by 90%

Automated routine operational tasks including backups, log rotation, and system patching, freeing the team to focus on strategic infrastructure improvements

EDUCATION

Bachelor of Science in Computer Science

University of Cambridge

Cambridge, United Kingdom

2012 - 2016

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, ECS, EKS, Lambda, S3, RDS), Azure (AKS, Virtual Machines), Google Cloud Platform

Container and Orchestration: Docker, Kubernetes, Helm, Docker Swarm

Infrastructure as Code: Terraform, Ansible, CloudFormation, Pulumi

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, ArgoCD, Flux

Monitoring and Logging: Prometheus, Grafana, ELK Stack, DataDog, New Relic

Scripting Languages: Bash, Python, Go

Databases: PostgreSQL, MySQL, MongoDB, Redis

Version Control: Git, GitHub, GitLab

Security: HashiCorp Vault, SSL/TLS, network security, vulnerability scanning

Agile Methodologies: Scrum, Kanban

PUBLIC REPOSITORIES

jmorton-devops/kubernetes-helm-charts - Collection of production-ready Helm charts for common applications with security best practices

jmorton-devops/terraform-aws-modules - Reusable Terraform modules for AWS infrastructure including networking, compute, and database resources

jmorton-devops/ansible-playbook-collection - Ansible playbooks for server provisioning, configuration management, and security hardening

jmorton-devops/python-monitoring-scripts - Custom Python scripts for monitoring application performance and infrastructure health with integration to Slack
