PROFESSIONAL SUMMARY

I'm a junior DevOps engineer based in Glasgow with a year of hands-on experience deploying and maintaining web applications in cloud environments. I got into DevOps after realising I enjoyed automation more than pure software development. I'm comfortable working with Linux servers, Docker, and AWS, and I'm keen to take on more complex infrastructure challenges. I learn quickly and don't mind admitting when I need help from more experienced teammates.

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure

Containerisation: Docker, Docker Compose

Infrastructure as Code: Kubernetes, Terraform, ArgoCD

CI/CD Pipelines: Jenkins, GitLab CI, GitHub Actions

Version Control: Git, GitHub, GitLab

Scripting: Bash, Python

Monitoring: Prometheus, Grafana, CloudWatch

Operating Systems: Linux, Ubuntu, CentOS

Databases: PostgreSQL, MySQL

Other: Nginx, Apache, SSL/TLS, DNS

WORK EXPERIENCE

DevOps Engineer Intern

TechFlow Solutions

techflow.io

Glasgow, United Kingdom

June 2023 - December 2023

Assisted senior DevOps engineers in deploying Node.js applications to AWS EC2 instances using manual configuration and basic automation scripts written in Bash.

Configured Nginx reverse proxies for load balancing across multiple application servers and documented the setup process for the team.

Monitored application logs and server metrics using CloudWatch and created simple dashboards to track CPU, memory, and disk usage across the infrastructure.

Participated in on-call rotation for production support and resolved issues such as disk space alerts and application restart failures.

Junior DevOps Engineer

Nexus Cloud Services

nexuscloud.net

Glasgow, United Kingdom

January 2024 - April 2024

Maintained Docker Compose configurations for development and staging environments, making updates when developers requested new dependencies or service versions.

Set up monitoring alerts in Prometheus and Grafana for HTTP response times, error rates, and database connection pools across multiple microservices.

Wrote Bash scripts to automate routine maintenance tasks including log rotation, backup verification, and security patch application on Linux servers.

Collaborated with the development team to troubleshoot deployment issues and improved documentation for common deployment procedures.

Systems Support Engineer

DataCore Infrastructure Ltd

datacore.co

Glasgow, United Kingdom

May 2024 - Present

Deploy and manage web application infrastructure on AWS using EC2, RDS, and S3 services, ensuring services remain operational and accessible to end users.

Manage Git repositories and configure basic CI/CD pipelines using GitHub Actions to automate testing and deployment of application updates to staging environments.

Perform regular security updates, patching, and compliance checks on production and non-production Linux servers across multiple regions.

Handle incident response for infrastructure issues, coordinating with developers and database administrators to diagnose and resolve problems affecting service availability.

EDUCATION

BSc Computing Science

University of Strathclyde

Glasgow, United Kingdom

September 2019 - June 2023

GITHUB REPOSITORIES

DevOps Toolkit: Collection of bash scripts for common server maintenance tasks including automated backups and log rotation.

Docker Compose Templates: Ready-to-use Docker Compose configurations for common development stacks including Node.js, PostgreSQL, and Redis.

AWS Lambda Functions: Serverless functions for automated EC2 snapshot management and cost reporting.

CI/CD Pipeline Examples: Sample Jenkins and GitHub Actions pipelines demonstrating deployment automation for containerised applications.
