## PROFESSIONAL SUMMARY

Results-driven and highly motivated Principal Engineer with a proven track record of spearheading cutting-edge technology initiatives across mission-critical infrastructure environments. Passionate about delivering actionable insights through data-driven decision making and leveraging cross-functional collaboration to drive organisational objectives. Champion of innovative solutions who synergistically combines technical expertise with strategic thinking to facilitate transformational outcomes. Demonstrated ability to harness emerging technologies and proven expertise in architecting scalable solutions that enable sustainable business growth.

## WORK EXPERIENCE

Principal Engineer

Nexus Digital Solutions

nexusdigital.io

Cambridge, United Kingdom

March 2021 - Present

Led the architectural redesign of core microservices infrastructure, resulting in 40% improvement in system latency and 99.99% uptime achievement across production environments. Spearheaded adoption of cloud-native technologies and containerisation strategies, enabling teams to accelerate deployment cycles from quarterly to weekly releases. Mentored and developed a team of 8 senior engineers, establishing coding standards and best practices that improved code quality metrics by 35%. Championed the implementation of comprehensive observability and monitoring solutions, providing actionable insights that reduced incident resolution time by 45%.

Senior Principal Engineer

Vertex Quantum Systems Ltd

vertexquantum.net

London, United Kingdom

June 2017 - February 2021

Architected and delivered a mission-critical real-time data processing platform handling 2 million events per second, leveraging Apache Kafka and Elasticsearch technologies. Established cross-functional collaboration between infrastructure, platform, and product teams to define technical roadmap and drive innovation initiatives. Designed and implemented comprehensive disaster recovery and business continuity strategies achieving RPO of 15 minutes and RTO of 1 hour. Led migration of legacy monolithic applications to microservices architecture, reducing operational costs by £2.3m annually while improving system resilience.

Senior Software Engineer

### IBM

ibm.com

Cambridge, United Kingdom

August 2012 - May 2017

Developed and maintained critical Java-based enterprise solutions supporting over 500 global clients across financial services and healthcare sectors. Led technical evaluation and implementation of enterprise messaging solutions including MQ Series and RabbitMQ, improving system throughput by 60%. Collaborated with architecture team to design and deliver cloud migration strategy for legacy applications, reducing infrastructure costs by 30%. Mentored junior developers and conducted technical interviews, contributing to recruitment of high-performing engineering talent.

## EDUCATION

Bachelor of Science in Computer Science

University of Cambridge

Cambridge, United Kingdom

Graduated 2012

## TECHNICAL SKILLS

Programming Languages: Java, Python, Go, JavaScript, SQL

Cloud Platforms: AWS, Google Cloud Platform, Microsoft Azure

Containerisation and Orchestration: Docker, Kubernetes, Docker Swarm

Message Queues and Streaming: Apache Kafka, RabbitMQ, AWS SQS, AWS Kinesis

Databases: PostgreSQL, MySQL, MongoDB, Elasticsearch, Redis

Infrastructure as Code: Terraform, CloudFormation, Ansible

Monitoring and Observability: Prometheus, Grafana, ELK Stack, DataDog

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Protocols and Standards: REST APIs, gRPC, HTTP/2, MQTT

Version Control: Git, Bitbucket, GitHub
