## PROFESSIONAL SUMMARY

Data Scientist with 5 years of hands-on experience building predictive models and extracting actionable insights from complex datasets. I've spent the last few years working across fintech and retail sectors, focusing on customer segmentation, churn prediction, and anomaly detection. I'm comfortable moving between Python and R depending on what the problem needs, and I've got a solid grasp of cloud platforms and SQL. I'm looking for a role where I can deepen my work with machine learning pipelines and mentor junior analysts.

## WORK EXPERIENCE

Senior Data Scientist

QuantumShift Analytics

Edinburgh, Scotland

www.quantumshift-analytics.io

March 2022 - Present

Developed and deployed three machine learning models for customer lifetime value prediction, resulting in a 22% improvement in marketing campaign targeting accuracy

Led the migration of legacy analytics workflows to Python-based automated pipelines, reducing monthly reporting time from 8 days to 2 days

Conducted exploratory data analysis on 500+ features from transactional datasets to identify key drivers of customer churn, presenting findings to C-suite stakeholders

Implemented feature engineering processes that improved model performance by 18% across our primary classification tasks

Data Scientist

HSBC Bank UK

Edinburgh, Scotland

www.hsbc.co.uk

July 2020 - February 2022

Built ensemble models for credit risk assessment using XGBoost and logistic regression on datasets containing 2 million+ customer records

Collaborated with compliance team to develop explainable AI frameworks ensuring model interpretability for regulatory requirements

Designed and executed A/B testing strategies for new recommendation algorithms, measuring uplift in product adoption

Created automated dashboards in Tableau to monitor model performance metrics and data drift across production systems

Data Analyst

Prism Insights Ltd

Bristol, England

www.prism-insights.net

June 2018 - June 2020

Performed statistical analysis on e-commerce transaction data to identify trends and anomalies affecting business operations

Developed SQL queries to extract and transform raw data from multiple sources into analysis-ready datasets

Built regression models to forecast inventory demand, achieving 85% accuracy on quarterly predictions

Documented analytical methodologies and created training materials for junior team members on best practices

## EDUCATION

MSc Data Science

University of Edinburgh

Edinburgh, Scotland

Graduated: September 2018

BSc Statistics

University of Manchester

Manchester, England

Graduated: June 2016

## TECHNICAL SKILLS

Programming Languages: Python, R, SQL

Machine Learning: Scikit-learn, XGBoost, TensorFlow, ensemble methods, classification, regression, clustering

Data Manipulation: Pandas, NumPy, dplyr

Visualization: Matplotlib, Seaborn, Tableau, ggplot2

Databases: PostgreSQL, MySQL, MongoDB

Cloud Platforms: AWS (S3, SageMaker), Microsoft Azure

Tools and Platforms: Jupyter Notebook, Git, Docker, Apache Spark

Statistical Methods: Hypothesis testing, time series analysis, A/B testing, causal inference
