## PROFESSIONAL SUMMARY

Results-driven and highly motivated Full Stack Engineer with a proven track record of delivering cutting-edge solutions that drive actionable insights and organisational objectives. Passionate about leveraging innovative technologies to spearhead cross-functional collaboration and champion mission-critical digital transformation initiatives. Committed to synergistically combining technical excellence with data-driven decision making to unlock sustainable value creation and empower teams to achieve transformational outcomes in dynamic environments.

## WORK EXPERIENCE

Senior Full Stack Engineer

TechVenture Solutions

www.techventuresolutions.io

Birmingham, United Kingdom

March 2022 - Present

Architected and deployed scalable microservices infrastructure supporting 2 million daily active users, implementing event-driven patterns with RabbitMQ and Apache Kafka to handle high-volume transaction processing with sub-100ms latency requirements.

Led cross-functional team of 5 developers in redesigning legacy monolithic application into modular architecture, reducing deployment time from 4 hours to 15 minutes and improving system reliability to 99.97% uptime.

Developed comprehensive REST and GraphQL APIs using Node.js and Express, optimising database queries through indexing strategies and query refactoring which reduced average response times by 62%.

Mentored 3 junior engineers on full stack best practices, code quality standards, and architectural decision-making, conducting weekly technical reviews and establishing coding guidelines adopted across the engineering team.

Full Stack Developer

Digital Innovations Ltd

www.digitalinnovations.co.uk

Coventry, United Kingdom

June 2019 - February 2022

Built responsive web applications using React and Vue.js frameworks, implementing component-driven architecture with Redux state management to handle complex application logic and improve maintainability across 12+ client projects.

Optimised frontend performance through lazy loading, code splitting, and CSS-in-JS solutions, achieving 40% improvement in Lighthouse performance scores and reducing time-to-interactive metrics.

Collaborated with backend teams to design and implement PostgreSQL database schemas, writing complex SQL queries and stored procedures that processed millions of records for analytics and reporting dashboards.

Participated in agile ceremonies and sprint planning sessions, delivering features on schedule with 98% velocity consistency and maintaining comprehensive test coverage above 85% using Jest and Mocha testing frameworks.

Junior Full Stack Engineer

WebCore Dynamics

www.webcoredynamics.net

Birmingham, United Kingdom

September 2016 - May 2019

Developed full stack features using Python Django and JavaScript, contributing to customer-facing web applications that processed real-time data and generated business intelligence reports for enterprise clients.

Implemented automated testing suites reducing manual QA efforts by 30%, establishing CI/CD pipelines using Jenkins that enabled daily deployments and improved code stability across multiple environments.

Assisted in database administration tasks including performance tuning, backup strategies, and data migration projects affecting 50+ GB datasets across production and staging systems.

Participated in code reviews and documentation efforts, creating technical specifications and API documentation that improved team onboarding time and knowledge sharing across the organisation.

## EDUCATION

Bachelor of Science in Computer Science

University of Birmingham

Birmingham, United Kingdom

2013 - 2016

## TECHNICAL SKILLS

Backend Development: Python, Node.js, Java, C#, ASP.NET Core, Django, Spring Boot, Express.js

Frontend Development: React, Vue.js, Angular, HTML5, CSS3, JavaScript ES6+, TypeScript, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud and DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Jenkins, Kubernetes, Terraform, ArgoCD

Message Queues: RabbitMQ, Apache Kafka

APIs: REST, GraphQL, WebSockets

Testing: Jest, Mocha, Pytest, JUnit

Version Control: Git, GitHub, GitLab

Agile Methodologies: Scrum, Kanban, Sprint Planning
