PROFESSIONAL SUMMARY

I'm a Research Engineer with seven years of experience developing and implementing innovative solutions in machine learning and data systems. My background spans both startup environments and established tech companies, where I've led technical investigations into complex problems and delivered results that directly impacted product strategy. I'm particularly drawn to roles that involve prototyping new ideas, mentoring junior engineers, and translating research findings into production-quality code. Based in Liverpool, I'm looking to contribute to teams tackling challenging computational problems.

WORK EXPERIENCE

Senior Research Engineer

Quantum Resonance Labs

www.quantumresonancelabs.io

London, United Kingdom

March 2022 - Present

Designed and implemented distributed machine learning pipelines processing 500GB+ daily datasets using PyTorch and Apache Spark for anomaly detection research projects. Led a team of three junior engineers in developing experimental frameworks for neural architecture search, reducing model training time by 40% through algorithmic optimization. Authored technical documentation and published two peer-reviewed papers on novel approaches to semi-supervised learning in industrial applications. Collaborated with product teams to translate research prototypes into scalable microservices deployed across Kubernetes clusters.

Research Software Engineer

Archstone Technologies (Previously known as Synapse Digital Research)

www.archstonetech.com

Manchester, United Kingdom

July 2019 - February 2022

Developed computer vision algorithms for real-time object detection using TensorFlow and CUDA, achieving 94% accuracy on proprietary datasets with latency under 100ms. Conducted experimental research into transfer learning approaches across different industrial domains, documenting findings in technical reports that influenced product roadmap decisions. Built continuous integration pipelines using Jenkins and GitLab CI to automate testing of ML models across multiple hardware configurations. Mentored two graduate placements on software engineering best practices and research methodology, both of whom transitioned to permanent roles.

Research Engineer

Nexus Cognitive Systems

www.nexuscognitive.net

Liverpool, United Kingdom

September 2017 - June 2019

Implemented natural language processing solutions for document classification and entity extraction using scikit-learn and spaCy, supporting three commercial clients. Conducted literature reviews and feasibility studies for emerging technologies including reinforcement learning and graph neural networks. Developed Python-based

testing frameworks to validate research hypotheses against baseline models and statistical benchmarks. Collaborated with external academic partners at University of Liverpool on joint research initiatives, presenting findings at two international conferences.

EDUCATION

PhD Computer Science

University of Manchester

2014 - 2017

Thesis: Distributed Algorithms for Real-Time Data Stream Analysis

MSc Advanced Computer Science

University of Bristol

2012 - 2013

BSc Computer Science

University of Warwick

2009 - 2012

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, SQL, Go

Machine Learning: PyTorch, TensorFlow, scikit-learn, XGBoost, Keras

Data Systems: Apache Spark, Hadoop, PostgreSQL, MongoDB, Redis

Cloud Platforms: AWS (EC2, S3, SageMaker), Google Cloud Platform

DevOps: Docker, Kubernetes, Jenkins, GitLab CI, Terraform

Research Tools: Jupyter, LaTeX, MATLAB, Git

Specializations: Deep Learning, Computer Vision, NLP, Distributed Systems
