PROFESSIONAL SUMMARY

Experienced Staff Engineer with seven years in backend systems and infrastructure. I've spent the last few years building scalable services at high-traffic companies, and I'm genuinely interested in problems around distributed systems and database optimization. I'm based in Cambridge and prefer working with Python and Go, though I'm comfortable picking up new languages when the project demands it. I'm looking for roles where I can mentor junior engineers while still getting hands-on with complex technical challenges.

TECHNICAL SKILLS

Languages: Python, Go, Java, JavaScript, SQL

Databases: PostgreSQL, MongoDB, Redis, Cassandra

Cloud Platforms: AWS, Google Cloud Platform, Docker, Kubernetes

Infrastructure: Terraform, Ansible, CI/CD pipelines, Datadog

Messaging: Kafka, RabbitMQ, gRPC

Architecture: Microservices, event-driven systems, API design

Tools: Git, Nginx, Linux, Grafana

WORK EXPERIENCE

Senior Backend Engineer

CloudSphere Technologies

www.cloudsphere.co.uk

London, United Kingdom

September 2022 - Present

Led the design and implementation of a real-time event streaming platform handling 2 million events per second across multiple data centers.

Mentored four junior engineers on system design principles, code review practices, and incident response procedures.

Reduced database query latency by 65 percent through query optimization and strategic caching layer introduction using Redis.

Established monitoring and alerting infrastructure using Datadog, reducing mean time to detection for critical issues from 45 minutes to 8 minutes.

Senior Software Engineer

Nexus Data Solutions

nexus-data.io

Cambridge, United Kingdom

January 2021 - August 2022

Architected and deployed a distributed tracing system that improved debugging capabilities across 50 microservices in production.

Drove migration of legacy monolithic application to event-driven architecture, reducing deployment time from two hours to fifteen minutes.

Implemented automated performance testing suite in CI/CD pipeline, catching regressions before production deployment.

Collaborated with infrastructure team to design Kubernetes deployment strategy, reducing operational overhead by 40 percent.

Software Engineer

StreamVault Inc

streamvault.net

Cambridge, United Kingdom

June 2018 - March 2021

Developed core backend services for customer data processing platform using Python and PostgreSQL, serving 500 enterprise clients.

Built resilient data pipeline handling 10 terabytes of daily ingestion with guaranteed delivery semantics using Kafka and custom retry logic.

Implemented comprehensive API documentation and versioning strategy, reducing onboarding time for client integrations by three weeks.

Participated in on-call rotation and led incident post-mortems, implementing preventative measures that reduced production incidents by 35 percent.

EDUCATION

Bachelor of Science in Computer Science

University of Cambridge

Cambridge, United Kingdom

2016 - 2018

GITHUB REPOSITORIES

github.com/jamesmitchell/distributed-cache-system

A Go-based distributed caching library with consistent hashing and failure recovery. Includes benchmarks and comprehensive testing suite.

github.com/jamesmitchell/kafka-stream-processor

Python library for building scalable stream processing applications on Apache Kafka with checkpointing and stateful operations.

github.com/jamesmitchell/postgres-query-analyzer

Tool for analyzing PostgreSQL query plans and suggesting optimization opportunities based on execution statistics.

github.com/jamesmitchell/api-versioning-middleware

Reusable middleware for managing multiple API versions in Python Flask applications with automatic documentation generation.

CERTIFICATIONS

AWS Certified Solutions Architect - Professional

Google Cloud Professional Data Engineer

Certified Kubernetes Administrator
