PROFESSIONAL SUMMARY

Software engineer with 8 years of experience building scalable backend systems and data pipelines. Started my career fixing bugs in legacy Java applications and gradually moved into Python-based infrastructure work. I've led small teams through complete platform redesigns and enjoy mentoring junior developers. Outside of work, I contribute to open source projects and run a small technical blog about distributed systems.

TECHNICAL SKILLS

Languages: Python, Java, Go, SQL, JavaScript

Frameworks and Libraries: Django, FastAPI, Spring Boot, React

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud Platforms: AWS, Google Cloud Platform, Docker, Kubernetes

DevOps and Tools: Git, Jenkins, Terraform, Grafana, Prometheus

Data Engineering: Apache Spark, Airflow, Kafka, dbt

Testing: pytest, JUnit, Selenium, pytest-mock

WORK EXPERIENCE

Senior Software Engineer

DataFlow Systems Ltd

dataflow.io

Glasgow, United Kingdom

March 2021 - Present

Led the redesign and migration of our core data pipeline platform from monolithic architecture to microservices, reducing deployment time from 45 minutes to 8 minutes and improving team velocity by 35 percent

Architected and implemented a new real-time event processing system using Kafka and Go that handles 2 million events per second with sub-second latency

Mentored four junior developers through their first two years at the company, with two promoted to mid-level engineers during my tenure

Established coding standards and automated testing practices that reduced production incidents by 42 percent and improved code review quality across the team

Backend Engineer

CloudTech Solutions

cloudtech.co

Edinburgh, United Kingdom

July 2017 - February 2021

Built and maintained Python microservices running on Kubernetes that processed over 1 billion API requests monthly for financial data aggregation clients

Implemented GPT-4 API integration into our customer analytics platform to provide automated insights on transaction patterns and anomalies

Designed database schemas and query optimizations for PostgreSQL that reduced average query times from 3.2 seconds to 450 milliseconds across the product

Developed comprehensive monitoring and alerting infrastructure using Prometheus and Grafana, enabling the team to detect and respond to issues within 2 minutes of occurrence

Junior Software Engineer

Thomson Industries plc

thomson-industries.co.uk

Glasgow, United Kingdom

August 2015 - June 2017

Fixed and debugged legacy Java applications supporting internal operations for over 200 end users across multiple departments

Automated manual testing processes using Selenium, reducing regression testing time from 4 hours to 35 minutes per release cycle

Contributed to the migration of a critical billing system from Oracle to MySQL, working closely with database administrators and senior engineers

Participated in daily stand-ups and sprint planning while learning agile methodologies and version control best practices with Git

EDUCATION

BSc Computer Science

University of Glasgow

Glasgow, United Kingdom

Graduated: June 2015

Relevant Coursework: Algorithms and Data Structures, Database Design, Software Engineering, Distributed Systems, Web Application Development

GITHUB REPOSITORIES

jcameronreid/pystream-processor - Python library for building data processing pipelines with functional composition patterns. 340 stars.

jcameronreid/k8s-config-templates - Collection of Kubernetes configuration templates and Helm charts for common microservices architectures. 215 stars.

jcameronreid/postgres-query-optimizer - Tool for analyzing and suggesting optimizations for slow PostgreSQL queries. 180 stars.

jcameronreid/event-sourcing-go - Educational implementation of event sourcing patterns in Go with comprehensive examples. 95 stars.
