PROFESSIONAL SUMMARY

Experienced Principal Engineer with 14 years of progressive responsibility in enterprise infrastructure and cloud architecture. I've spent the last decade designing and implementing large-scale systems that handle millions of transactions daily, working across finance, telecommunications, and public sector. I'm genuinely interested in solving complex distributed systems problems and mentoring teams to think critically about scalability and resilience. Most recently I've focused on cloud migration strategies and building robust DevOps practices that actually stick.

WORK EXPERIENCE

Principal Engineer

Nexus Digital Co

nexusdigital.io

Glasgow, United Kingdom

March 2021 - Present

Led architectural design and implementation of microservices platform migrating legacy monolith applications to Kubernetes, reducing infrastructure costs by 32 percent across the business. Established cloud governance framework and security policies for multi-region AWS deployments, ensuring compliance with ISO 27001 and SOC 2 Type II certifications. Mentored team of 8 senior engineers through adoption of infrastructure-as-code practices using Terraform and CloudFormation, improving deployment frequency from monthly to daily releases. Designed and implemented comprehensive disaster recovery procedures with RPO of 15 minutes and RTO of 1 hour, tested quarterly across production environments.

Senior Platform Engineer

BT Global Services

bt.com

Glasgow, United Kingdom

June 2017 - February 2021

Architected containerized platform supporting 150+ microservices across development, staging, and production environments using Docker and Kubernetes, serving over 2 million daily active users. Built comprehensive CI/CD pipeline using Jenkins and GitLab CI, reducing average deployment time from 45 minutes to 8 minutes and improving success rate to 99.2 percent. Implemented comprehensive observability stack including Prometheus, Grafana, and ELK, enabling rapid incident response and reducing mean time to recovery by 60 percent. Led capacity planning and cost optimization initiatives that reduced monthly cloud spend by 340,000 GBP through resource consolidation and reserved instance procurement.

Senior Software Engineer

Lloyds Banking Group

lloydsbankinggroup.com

Edinburgh, United Kingdom

August 2010 - May 2017

Designed and deployed distributed transaction processing system handling 500,000 daily transactions across multiple data centres with zero data loss guarantees. Developed automation frameworks and tools that reduced infrastructure provisioning time from 3 weeks to 2 hours, enabling rapid response to business demands. Implemented robust monitoring and alerting systems for core banking applications, maintaining 99.99 percent uptime SLA across production services. Worked closely with security teams to implement defense-in-depth architecture, conducting regular penetration testing and vulnerability assessments across all critical systems.

EDUCATION

BSc Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated June 2010

Grade: 2:1

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Orchestration: Kubernetes, Docker Swarm, Amazon ECS

Infrastructure as Code: Terraform, CloudFormation, Ansible, Puppet

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, CircleCI

Programming Languages: Java, Python, Go, Bash

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Monitoring and Logging: Prometheus, Grafana, ELK Stack, Datadog

Networking: TCP/IP, DNS, VPN, Load Balancing, CDN Configuration

Security: IAM, Secrets Management, TLS/SSL, Network Segmentation

Version Control: Git, Bitbucket, GitHub
