PROFESSIONAL SUMMARY

I'm a DevOps engineer with 6 years of hands-on experience building and maintaining cloud infrastructure across AWS and Azure environments. I've led teams through major migrations, reduced deployment times by 70%, and established monitoring practices that caught issues before they impacted users. I enjoy solving infrastructure problems and mentoring junior engineers who are starting their DevOps journeys.

WORK EXPERIENCE

Senior DevOps Engineer

CloudScale Solutions Ltd

www.cloudscalesolutions.io

Leeds, United Kingdom

March 2022 - Present

Architected and implemented a Kubernetes-based platform serving 15 microservices with 99.9% uptime SLA, reducing infrastructure costs by 35% through resource optimization and autoscaling policies.

Led a team of two junior DevOps engineers on implementing CI/CD pipelines using Jenkins and GitLab CI, reducing deployment time from 45 minutes to 8 minutes for critical applications.

Designed and deployed comprehensive monitoring and alerting infrastructure using Prometheus, Grafana, and ELK stack, enabling the engineering team to detect and resolve incidents 60% faster.

Mentored four junior team members through Docker containerization, Terraform infrastructure as code, and AWS best practices, with two promoted to mid-level positions within the team.

DevOps Engineer

Nexus Digital Services

www.nexusdigital.co.net

Manchester, United Kingdom

June 2019 - February 2022

Migrated 20+ applications from legacy on-premises servers to AWS, managing EC2 instances, RDS databases, and S3 storage while training the ops team on cloud-native practices.

Implemented Infrastructure as Code using Terraform to manage 50+ resources across multiple environments, reducing manual configuration errors by 90% and enabling disaster recovery testing.

Established and maintained comprehensive backup and disaster recovery procedures, achieving a 4-hour RTO and 1-hour RPO for critical systems through automated AWS backup policies.

Built custom Python and Bash automation scripts to streamline repetitive operational tasks, saving the team approximately 10 hours per week in manual work.

DevOps Engineer (Junior)

TechVault Solutions

www.techvault.io

Bradford, United Kingdom

September 2018 - May 2019

Assisted with deployment and maintenance of applications running on AWS infrastructure, supporting the senior team with EC2 instance management and basic troubleshooting.

Supported the implementation of Docker containerization for three legacy applications, documenting the process and helping developers understand container concepts.

Monitored server health and application performance using CloudWatch, creating basic dashboards and responding to operational alerts during business hours.

Participated in on-call rotation for production support, responding to infrastructure incidents and escalating issues to senior engineers when necessary.

EDUCATION

BSc Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2018

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, Lambda, CloudFormation), Microsoft Azure (VMs, App Service, Azure DevOps)

Containerization: Docker, Kubernetes, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch, Datadog

Scripting: Python, Bash, PowerShell

Databases: PostgreSQL, MySQL, MongoDB, RDS

Version Control: Git, GitLab, GitHub

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

VCS and Networking: VPC, Security Groups, Load Balancing, Route 53

Agile Methodologies: Scrum, Kanban
