PROFESSIONAL SUMMARY

I'm a junior BI analyst with two years of experience building dashboards and reports that actually get used by business teams. I started as a data analyst at a fintech startup and discovered I genuinely enjoy turning messy datasets into insights that help people make decisions. I have a solid foundation in SQL and Tableau, and I'm comfortable working with both technical and non-technical stakeholders. I'm looking for my next role where I can deepen my skills in data modelling and learn more about the analytics side of things.

WORK EXPERIENCE

BI Analyst

DataFlow Solutions

dataflow.io

Edinburgh, United Kingdom

March 2023 - Present

Developed and maintained 12 operational dashboards in Tableau that track sales performance, customer acquisition, and churn metrics for stakeholders across the business.

Wrote approximately 50 SQL queries per month against PostgreSQL databases to extract, transform and load data for weekly reporting cycles.

Collaborated with product and finance teams to define KPIs and created a shared metrics dictionary that reduced definition disputes by 70 percent.

Troubleshot dashboard performance issues and optimized slow queries, reducing average load times from 15 seconds to 3 seconds for the executive dashboard.

Junior Data Analyst

Fintech Innovations Ltd

fintechinnovations.net

Edinburgh, United Kingdom

September 2022 - February 2023

Built daily transaction reconciliation reports using SQL and Excel that identified payment discrepancies worth an average of £8,000 per week.

Created my first Tableau dashboard tracking customer onboarding metrics, which revealed a bottleneck in the KYC process and led to a process redesign.

Performed data quality checks on customer datasets and documented issues that helped the engineering team fix data pipeline bugs.

Supported the finance team with ad hoc analysis for quarterly business reviews, including cohort analysis of customer segments by acquisition channel.

Data Reporting Coordinator

Edinburgh Council

www.edinburgh.gov.uk

Edinburgh, United Kingdom

June 2021 - August 2022

Maintained Excel-based reports tracking service delivery metrics across three council departments, refreshing data weekly from multiple disparate systems.

Assisted in data extraction from council databases and prepared datasets for external reporting requirements to government agencies.

Documented data lineage and business logic for existing reports to create a knowledge base for the reporting team.

Supported the transition of three legacy reports from Excel to a new analytics platform, including testing and user training.

EDUCATION

BSc Business Analytics

University of Edinburgh

Edinburgh, United Kingdom

Graduated June 2021

SKILLS

SQL (PostgreSQL, basic MySQL)

Tableau (dashboards, calculated fields, data sources)

Excel (pivot tables, VLOOKUP, complex formulas)

Data visualisation

ETL processes

Microsoft Power Query

Python (basics)

Statistical analysis

Data quality assessment

Stakeholder communication
