PROFESSIONAL SUMMARY

I'm a machine learning engineer with 14 years of experience building and deploying production systems that handle real-world data challenges. I've spent most of my career moving models from notebooks into systems that serve millions of requests daily, working across recommendation engines, computer vision, and natural language processing. I'm particularly interested in bridging the gap between research and engineering, making sure theoretical advances actually improve user outcomes.

WORK EXPERIENCE

Staff Machine Learning Engineer

DataFlow Systems

Manchester, United Kingdom

www.dataflow-systems.io

May 2021 - Present

Led the development and deployment of a real-time recommendation engine serving 2.5 million daily active users with sub-100ms latency requirements. Built a team of 4 junior engineers and established best practices for model experimentation, A/B testing, and production monitoring that reduced model incident rates by 65%. Designed an automated feature engineering pipeline that processes 500GB of daily data and reduced feature development time from weeks to days. Mentored 6 engineers across the company on machine learning systems design and helped establish an internal community of practice that improved knowledge sharing across teams.

Senior Machine Learning Engineer

Vertex Analytics

London, United Kingdom

www.vertex-analytics.co

September 2017 - April 2021

Developed a computer vision system for document classification that improved processing accuracy from 78% to 94.2% by incorporating transfer learning and ensemble methods. Owned the end-to-end lifecycle of 3 production models including training infrastructure, deployment pipelines, and monitoring systems that tracked model drift and data quality issues. Implemented a distributed training framework using Kubernetes that reduced model training time from 72 hours to 16 hours, enabling daily model updates. Conducted code reviews and design discussions that mentored 5 junior team members and established quality standards for model development across the organization.

Machine Learning Engineer

Insight Tech Solutions

Bristol, United Kingdom

www.insighttech.net

March 2013 - August 2017

Built and deployed natural language processing models for customer support ticket classification that reduced manual categorization workload by 40%. Developed Python-based data pipelines that ingested data from 12

different sources and performed feature engineering for downstream machine learning models. Collaborated with data scientists to translate research papers into production implementations, including implementing gradient boosting models that improved prediction accuracy by 18%. Conducted statistical analysis and A/B testing on model changes to quantify business impact and guide prioritization of model improvements.

EDUCATION

MSc Machine Learning

University of Manchester

Manchester, United Kingdom

Graduated: September 2010

BSc Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2008

TECHNICAL SKILLS

Machine Learning: Scikit-learn, TensorFlow, PyTorch, XGBoost, LightGBM, computer vision, NLP, recommendation systems, ensemble methods, transfer learning

Data Engineering: Python, SQL, Apache Spark, Pandas, data pipelines, ETL, distributed systems

MLOps and Deployment: Docker, Kubernetes, TensorFlow Serving, model monitoring, A/B testing, feature stores

Cloud Platforms: AWS (SageMaker, EC2, S3), GCP, model versioning, experiment tracking

Tools and Frameworks: Jupyter notebooks, Git, DVC, Weights and Biases, Airflow, statistical analysis

CERTIFICATIONS

AWS Certified Machine Learning - Specialty (2021)

Deep Learning Specialization, Coursera (2019)
