PROFESSIONAL SUMMARY

Forward Deployed Engineer with 2 years of hands-on experience supporting infrastructure and systems in fast-paced environments. I've spent the last year working directly with customer sites to troubleshoot network issues and deploy configurations in real-time. I'm comfortable working across Linux systems, cloud platforms, and automation tooling, and I genuinely enjoy the problem-solving side of technical work. Looking to grow my expertise in infrastructure automation and systems reliability.

WORK EXPERIENCE

Forward Deployed Engineer

Vertex Systems

vertex-systems.io

London, United Kingdom

March 2023 - Present

Deployed and configured network infrastructure across 12 customer sites in EMEA region, troubleshooting connectivity issues and resolving configurations on-site within SLA windows.

Automated routine infrastructure tasks using Python and Bash scripts, reducing manual deployment time by approximately 35 percent across standard configurations.

Maintained detailed documentation of customer environments and created runbooks for common issues, improving incident response time for support teams.

Collaborated with backend engineers to diagnose application performance issues related to network latency and DNS resolution.

Junior Systems Engineer

CloudBridge Solutions

cloudbridge.co

London, United Kingdom

September 2022 - February 2023

Managed AWS infrastructure for 15 internal services, including EC2 instances, RDS databases, and S3 bucket configurations.

Implemented monitoring and alerting using CloudWatch and Prometheus, establishing baseline metrics for application performance.

Assisted in planning and executing a database migration project that involved coordinating with 3 different teams and zero downtime deployment.

Responded to production incidents and implemented temporary fixes, then worked on permanent solutions with senior engineers.

IT Support Technician

DataCore Solutions Ltd

datacore.net

London, United Kingdom

June 2021 - August 2022

Provided technical support to 80 end users via ticket system and phone, resolving hardware, software, and connectivity issues.

Set up and configured new workstations for onboarding employees, ensuring compliance with security policies and group policy standards.

Maintained IT asset inventory and performed quarterly audits of hardware and software licenses.

Documented troubleshooting procedures and created knowledge base articles that reduced repeat tickets by 20 percent.

EDUCATION

BSc Computing Science

University of Edinburgh

Edinburgh, United Kingdom

2017 - 2021

SKILLS

Cloud Platforms: AWS, basic GCP experience

Infrastructure as Code: Terraform, CloudFormation

Programming: Python, Bash, basic Go

Monitoring and Logging: Prometheus, CloudWatch, ELK stack

Networking: TCP/IP, DNS, routing, VPN configuration

Linux Administration: CentOS, Ubuntu, basic kernel tuning

Containerisation: Docker, basic Kubernetes knowledge

Version Control: Git

Databases: PostgreSQL, MySQL

PUBLIC REPOSITORIES

https://github.com/jamesmitchell92/terraform-aws-vpc-bootstrap

Terraform modules for quick VPC deployment with public and private subnets. Includes security group templates and NAT gateway configuration.

https://github.com/jamesmitchell92/network-diagnostic-tool

Python CLI tool for automated network diagnostics including latency testing, DNS resolution checks, and packet loss analysis.

https://github.com/jamesmitchell92/linux-hardening-scripts

Collection of Bash scripts for hardening Ubuntu and CentOS systems, applying firewall rules, disabling unnecessary services, and security auditing.

https://github.com/jamesmitchell92/prometheus-monitoring-setup

Ansible playbook for deploying Prometheus, Grafana, and Node Exporter across multiple servers with pre-built dashboards.
