PROFESSIONAL SUMMARY

I'm a Data Engineer with 14 years building scalable data infrastructure and pipelines for organisations handling serious data volumes. I've spent my career moving from hands-on engineering to architecting solutions, mentoring teams, and making technical decisions that stick. I work best when I'm untangling complex data problems and helping others understand why the architecture matters, not just what it does.

WORK EXPERIENCE

Staff Data Engineer

DataFlow Systems

www.dataflow.io

Glasgow, Scotland

March 2021 - Present

Architected and built a distributed data platform processing 50TB daily across 30+ internal teams using Apache Spark and Kubernetes, reducing query latencies by 65% compared to legacy systems.

Led a team of 5 engineers through redesign of core ETL infrastructure, establishing best practices around data quality, testing, and documentation that became company standards.

Implemented comprehensive data governance framework including lineage tracking, automated quality checks, and access controls across 200+ datasets serving analytics, ML, and operational teams.

Mentored 8 junior engineers and conducted technical interviews, developing training materials on distributed systems concepts and helping them progress into senior roles.

Senior Data Engineer

Insight Analytics Ltd

www.insight-analytics.co

Edinburgh, Scotland

June 2016 - February 2021

Designed and deployed real-time data pipeline processing user event streams from 15 million daily active users using Kafka, Flink, and PostgreSQL, maintaining 99.95% uptime.

Reduced data warehouse infrastructure costs by 40% through query optimization, partitioning strategy redesign, and migration of cold data to cost-effective storage tiers.

Built data extraction and transformation layer integrating 25 external APIs and third-party data sources, automating 60+ manual reporting processes previously handled by analytics team.

Established data quality monitoring using Great Expectations, catching data anomalies within minutes and reducing downstream reporting errors by 85%.

Data Engineer

TechBridge Solutions

www.techbridge.net

Glasgow, Scotland

July 2010 - May 2016

Developed Python and SQL-based ETL pipelines moving data between legacy systems and data warehouse, supporting 50+ business intelligence dashboards.

Migrated company data infrastructure from traditional databases to Hadoop ecosystem, improving processing performance for historical analysis workloads by 8x.

Collaborated with analytics and business teams to gather requirements, design schemas, and deliver data solutions for ad-hoc reporting and financial analysis.

Maintained production data systems supporting daily operations with 99.8% availability, implementing monitoring alerts and documenting runbooks for on-call support.

EDUCATION

BSc Computer Science with Business Studies

University of Strathclyde

Glasgow, Scotland

2006 - 2010

TECHNICAL SKILLS

Languages: Python, SQL, Scala, Bash

Big Data Technologies: Apache Spark, Hadoop, Apache Flink, Apache Kafka

Databases: PostgreSQL, MySQL, Snowflake, Redshift, Cassandra

Cloud Platforms: AWS (EC2, S3, Lambda, RDS), Google Cloud Platform

Data Quality & Governance: Great Expectations, dbt, Apache Atlas

Orchestration & Workflow: Apache Airflow, Prefect

Container & Infrastructure: Docker, Kubernetes, Terraform

Monitoring & Logging: ELK Stack, Prometheus, Grafana

Version Control: Git, GitHub, GitLab
