PROFESSIONAL SUMMARY

I'm a BI Analyst with five years of experience building dashboards and data pipelines for financial services and retail companies. I started my career learning SQL and Tableau on the job, and I've developed a strong foundation in data warehousing and ETL processes. I'm most interested in solving problems where messy data becomes actionable insights, and I've found I'm particularly good at working with stakeholders who don't speak the language of databases. I'm looking for a role where I can take on more responsibility for data architecture decisions.

WORK EXPERIENCE

BI Analyst

DataVault Solutions

www.datavault.io

Glasgow, United Kingdom

March 2022 - Present

Designed and maintained five Tableau dashboards serving 40+ business users across finance and operations teams, reducing manual reporting time by 12 hours per week

Built automated ETL pipelines using Python and SQL to consolidate data from eight different source systems into a centralised data warehouse

Investigated and resolved data quality issues affecting KPI calculations, documenting root causes and implementing validation checks in the pipeline

Partnered with the finance director to define new metrics for customer profitability analysis, resulting in a strategic decision to exit two underperforming product lines

Senior BI Analyst

Insight Analytics Ltd

www.insightanalytics.co

Edinburgh, United Kingdom

June 2020 - February 2022

Led the redesign of the company's main sales dashboard using Tableau, which improved user adoption from 30% to 78% within three months

Created SQL stored procedures to automate weekly reconciliation processes between the data warehouse and legacy accounting system, eliminating manual data entry errors

Mentored two junior analysts on dimensional modelling and best practices for writing efficient SQL queries

Delivered ad-hoc analysis on customer segmentation for the marketing team, identifying a high-value customer cohort that became the focus of a targeted retention campaign

Business Analyst

Retail Intelligence Group

www.retailintel.net

Glasgow, United Kingdom

August 2018 - May 2020

Extracted and transformed sales data from point-of-sale systems using SQL and Python, loading it into Snowflake for analysis by the broader team

Created performance scorecards for store managers using Tableau, tracking metrics such as footfall, transaction value, and inventory turnover

Documented data dictionary and ETL processes to ensure knowledge transfer and system maintainability

Supported the finance team during year-end audit by pulling transaction-level data and reconciling variance reports

EDUCATION

BSc Business Information Technology

University of Aberdeen

Aberdeen, United Kingdom

Graduated: June 2018

TECHNICAL SKILLS

Data Visualisation: Tableau, Power BI

Programming Languages: Python, SQL

Databases: SQL Server, Snowflake, PostgreSQL

ETL Tools: SSIS, Talend

Cloud Platforms: AWS, Snowflake

Version Control: Git, GitHub

Other: Excel, dimensional modelling, data warehousing, business requirements gathering
