PROFESSIONAL SUMMARY

Data scientist with one year of professional experience building machine learning models and analyzing complex datasets. I started my career at a fintech startup where I developed predictive models for credit risk assessment, then moved into e-commerce analytics. I'm particularly interested in time series forecasting and have spent the last six months learning PyTorch. Outside of work, I enjoy contributing to open source projects and participating in Kaggle competitions.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL

Machine Learning: scikit-learn, TensorFlow, PyTorch, XGBoost

Data Analysis: Pandas, NumPy, SciPy, Matplotlib, Seaborn

Databases: PostgreSQL, MySQL, MongoDB

Tools and Platforms: Jupyter Notebook, Git, Docker, AWS S3

Statistical Methods: Regression analysis, classification, clustering, hypothesis testing

Other: Excel, Tableau, Linux

WORK EXPERIENCE

Junior Data Scientist

FinVault Solutions

www.finvault.io

Glasgow, United Kingdom

June 2023 - Present

Developed and deployed a logistic regression model for credit risk classification that achieved 87% accuracy and helped reduce loan defaults by 12%.

Built an automated ETL pipeline using Python that processes 5 million customer transaction records daily from multiple data sources into a centralized warehouse.

Performed exploratory data analysis on customer behavior patterns, identifying three key segments that informed the marketing team's campaign strategy.

Documented model performance metrics and created interactive Jupyter notebooks to communicate findings to non-technical stakeholders during monthly reviews.

Data Analyst Intern

RetailSync Ltd

www.retailsync.co

Edinburgh, United Kingdom

January 2023 - May 2023

Created SQL queries to extract and transform data from the company database, reducing manual reporting time by 20 hours per week.

Built Tableau dashboards tracking sales performance, inventory levels, and customer acquisition costs across fifteen regional stores.

Investigated a 15% drop in quarterly revenue and identified that changes to the website recommendation algorithm were the root cause through statistical analysis.

Assisted the machine learning engineer in preparing datasets for a customer churn prediction model by handling missing values and performing feature scaling.

Data Science Intern

DataCore Analytics

www.datacore.net

Glasgow, United Kingdom

September 2022 - December 2022

Analyzed historical sales data using Python and identified seasonal patterns that improved forecasting accuracy by 8% compared to the previous baseline model.

Cleaned and preprocessed datasets containing over 500,000 records, removing duplicates and handling outliers to ensure data quality before modeling.

Participated in daily stand-ups and weekly planning sessions, learning agile development practices and how to break down complex problems into manageable tasks.

Documented code with clear comments and created a README file for the intern project repository to help future team members understand the workflow.

EDUCATION

Bachelor of Science in Mathematics with Computer Science

University of Glasgow

Glasgow, United Kingdom

Graduated: June 2022

Grade: 2:1

CERTIFICATIONS AND ONLINE LEARNING

Data Science Professional Certificate, Coursera (In Progress)

Machine Learning Specialization, Andrew Ng, Coursera (Completed December 2022)

PUBLIC REPOSITORIES

github.com/jamesmorrison92/customer-churn-prediction

Repository containing a complete machine learning pipeline for predicting customer churn using XGBoost and logistic regression with 10-fold cross validation.

github.com/jamesmorrison92/time-series-forecasting

Time series analysis project using ARIMA and Prophet models to forecast daily energy consumption with comparison of model performance metrics.

github.com/jamesmorrison92/sentiment-analysis-twitter

Natural language processing project that classifies tweets as positive or negative sentiment using TF-IDF vectorization and scikit-learn classifiers.

github.com/jamesmorrison92/iris-data-visualization

Exploratory data analysis of the iris dataset with advanced matplotlib and seaborn visualizations demonstrating statistical relationships between features.
