PROFESSIONAL SUMMARY

I'm a backend engineer with six years of experience building scalable systems that handle millions of requests daily. I've spent the last few years focused on microservices architecture and cloud infrastructure at fast-growing companies. I enjoy solving complex database performance problems and mentoring junior developers through code reviews and pair programming sessions.

WORK EXPERIENCE

Senior Backend Engineer

DataStream Solutions

www.datastream-solutions.io

Leeds, United Kingdom

March 2022 - Present

Designed and implemented a microservices architecture that reduced API response times by 40% across our platform serving 500,000+ monthly active users.

Led the migration of monolithic PostgreSQL databases to a distributed system using sharding, improving query performance and enabling horizontal scaling.

Mentored three junior backend engineers, conducting weekly code reviews and establishing best practices for testing and documentation across the team.

Implemented comprehensive monitoring and alerting using Prometheus and Grafana, reducing mean time to resolution for production incidents by 55%.

Backend Engineer

Velocity Analytics

www.velocity-analytics.co

Manchester, United Kingdom

July 2019 - February 2022

Built RESTful APIs in Python and Go that processed real-time financial data streams with sub-100ms latency requirements for institutional clients.

Optimized database queries and introduced Redis caching layer, reducing load on primary database by 60% during peak trading hours.

Developed automated deployment pipelines using Docker and Kubernetes, enabling the team to deploy code changes safely multiple times per day.

Collaborated with frontend and data science teams to design event streaming architecture using Apache Kafka for asynchronous processing.

Junior Backend Engineer

TechCore Digital

www.techcore-digital.net

Leeds, United Kingdom

September 2018 - June 2019

Developed backend features for an e-commerce platform handling approximately 50,000 daily transactions using Java and Spring Boot.

Fixed critical bugs in payment processing modules and wrote unit tests to prevent regressions, achieving 85% code coverage.

Participated in on-call rotation for production support, responding to alerts and resolving issues within agreed SLAs.

Documented API endpoints and created runbooks for common operational procedures used by the support team.

EDUCATION

BSc Computer Science

University of Leeds

Leeds, United Kingdom

2014 - 2018

SKILLS

Languages: Python, Go, Java, SQL

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud Platforms: AWS (EC2, RDS, Lambda, S3), Google Cloud Platform

Container Orchestration: Docker, Kubernetes

Message Queues: Apache Kafka, RabbitMQ

Monitoring: Prometheus, Grafana, ELK Stack

Version Control: Git

Methodologies: Agile, Test-Driven Development, Microservices Architecture

API Design: REST, gRPC
