PROFESSIONAL SUMMARY

I'm a Research Engineer with a passion for exploring new technologies and solving complex technical problems. My background combines hands-on software development with research into machine learning applications. I'm eager to deepen my expertise in data science and contribute to meaningful projects that push the boundaries of what's currently possible.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Java, SQL

Machine Learning: TensorFlow, PyTorch, scikit-learn, pandas

Data Processing: NumPy, Matplotlib, Jupyter Notebooks

Web Technologies: React, Node.js, REST APIs

Tools and Platforms: Git, Docker, AWS, Linux

Databases: PostgreSQL, MongoDB, Redis

Research Areas: Neural networks, anomaly detection, time series analysis

WORK EXPERIENCE

Research Engineer

DataFlow Systems

Glasgow, United Kingdom

www.dataflowsystems.co

June 2023 - Present

Designed and implemented Python scripts to preprocess large datasets containing 10 million+ records for machine learning pipelines, reducing processing time by 35 percent.

Conducted experiments with convolutional neural networks to detect anomalies in sensor data, achieving 92 percent accuracy on validation set.

Collaborated with senior researchers to document findings and contributed sections to two technical reports on time series forecasting methods.

Built automated monitoring system using Docker and AWS to track model performance in production, alerting team when accuracy drops below thresholds.

Junior Software Developer

TechVision Solutions Ltd

Edinburgh, United Kingdom

techvisionsolutions.net

January 2023 - May 2023

Developed REST API endpoints in Node.js to support mobile application, handling 500+ concurrent requests during peak usage.

Created unit tests using Jest framework, achieving 80 percent code coverage across critical business logic functions.

Participated in sprint planning and daily standups, delivering features on schedule across four two-week development cycles.

Debugged and resolved 15+ production issues reported by users, implementing permanent fixes to prevent recurring problems.

Associate Developer

InnovateTech Ltd

Glasgow, United Kingdom

innovatetech.io

September 2022 - December 2022

Built frontend components using React to display real-time data visualizations for financial analytics dashboard.

Learned PostgreSQL fundamentals and wrote complex SQL queries to extract business insights from relational databases.

Assisted with integration testing of features before release, identifying and documenting 8 critical bugs that were resolved before deployment.

Contributed to internal documentation wiki, writing guides for new developers joining the team on project setup and coding standards.

EDUCATION

Bachelor of Science in Computer Science

University of Glasgow

Glasgow, United Kingdom

Graduated: June 2022

Relevant Coursework: Machine Learning, Data Structures, Algorithms, Software Engineering, Databases, Artificial Intelligence

REPOSITORIES

github.com/jmorrison92/anomaly-detector - Python implementation of isolation forest algorithm for detecting outliers in time series data.

github.com/jmorrison92/sentiment-analyzer - Natural language processing project using BERT transformers to classify customer reviews as positive or negative.

github.com/jmorrison92/stock-dashboard - React web application displaying real-time stock prices with historical charts powered by public financial APIs.

github.com/jmorrison92/neural-network-from-scratch - Educational implementation of fully connected neural network in NumPy without external deep learning frameworks.

CERTIFICATIONS

Google Cloud Platform Associate Cloud Engineer Certificate - In progress, expected completion March 2024
