PROFESSIONAL SUMMARY

DevOps engineer with 3 years of hands-on experience building and maintaining cloud infrastructure for early-stage startups and established tech companies. Strong background in containerization, CI/CD pipeline design, and cloud platform management. I enjoy solving infrastructure problems that directly improve developer productivity and system reliability. Currently based in Cambridge and actively contributing to open-source DevOps tools.

WORK EXPERIENCE

DevOps Engineer

CloudScale Systems Ltd

cambridge.cloudscale.co.uk

Cambridge, United Kingdom

June 2022 - Present

Designed and implemented a complete CI/CD pipeline using Jenkins and GitLab that reduced deployment time from 45 minutes to 8 minutes across 12 microservices.

Migrated legacy monolithic application infrastructure from on-premise servers to AWS ECS with Terraform, reducing operational costs by 35% and improving system scalability.

Established comprehensive monitoring and alerting using Prometheus, Grafana, and PagerDuty, reducing mean time to incident detection from 30 minutes to 2 minutes.

Mentored 2 junior engineers on containerization best practices and Kubernetes deployment strategies during company infrastructure modernization project.

Infrastructure Engineer

TechVenture.io

London, United Kingdom

February 2021 - May 2022

Managed Kubernetes clusters hosting 40+ applications for SaaS platform serving 500,000+ users, handling resource optimization and automated scaling policies.

Implemented Docker containerization strategy for legacy Java applications, enabling consistent deployments across development, staging, and production environments.

Automated infrastructure provisioning using Terraform and Ansible, reducing manual setup time for new environments from 6 hours to 15 minutes.

Collaborated with security team to implement network policies, secrets management with HashiCorp Vault, and regular vulnerability scanning using Trivy.

Junior DevOps Engineer

DataFlow Systems Ltd

www.dataflowsystems.net

Cambridge, United Kingdom

August 2020 - January 2021

Supported deployment and maintenance of multi-region AWS infrastructure using CloudFormation and manual console operations.

Wrote bash and Python scripts to automate routine server maintenance tasks and log analysis across 30+ Linux instances.

Assisted in setting up ELK stack for centralized logging and created runbooks documenting common troubleshooting procedures.

Participated in on-call rotation providing second-level support for production incidents and contributing to post-incident reviews.

EDUCATION

BSc Computer Science

University of Manchester

Manchester, United Kingdom

2017 - 2020

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, ECS, RDS, S3, Lambda, CloudFormation, VPC), Google Cloud Platform, Azure basics

Container and Orchestration: Docker, Kubernetes, Helm, Amazon ECS

Infrastructure as Code: Terraform, Ansible, CloudFormation, Vagrant

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, ArgoCD

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch, Datadog

Programming Languages: Python, Bash, Go basics

Databases: PostgreSQL, MySQL, DynamoDB, Redis

Version Control: Git, GitHub, GitLab

Other Tools: Nginx, Apache, HashiCorp Vault, Linux Administration, TCP/IP Networking

PUBLIC REPOSITORIES

github.com/jamesrichardson92/terraform-aws-ecs-cluster - Production-ready Terraform module for AWS ECS cluster provisioning with auto-scaling

github.com/jamesrichardson92/k8s-monitoring-stack - Helm chart deploying complete Prometheus and Grafana stack to Kubernetes clusters

github.com/jamesrichardson92/deployment-automation-scripts - Collection of Python and Bash scripts for infrastructure automation and maintenance

github.com/jamesrichardson92/docker-multi-app-compose - Docker Compose configuration for local development environment with multiple interconnected services
