PROFESSIONAL SUMMARY

Full Stack Engineer with 14 years of hands-on experience building scalable web applications and leading technical initiatives across early-stage startups and established tech companies. I've spent the last six years focusing on cloud infrastructure and microservices architecture, and I genuinely enjoy mentoring junior developers through complex problem-solving. When I'm not optimizing database queries, I'm usually tinkering with new deployment strategies or helping teams work through architectural decisions.

WORK EXPERIENCE

Senior Full Stack Engineer

Velocity Labs

www.velocitylabs.io

Oxford, United Kingdom

March 2021 - Present

Architected and implemented a microservices platform using Node.js and PostgreSQL that processes 2 million transactions daily for financial services clients, reducing latency by 40% compared to the legacy monolithic system.

Led a team of five engineers through the complete redesign of our customer-facing dashboard using React and TypeScript, resulting in a 65% improvement in page load times and significantly improved user engagement metrics.

Established comprehensive CI/CD pipelines using GitHub Actions and Docker, enabling 30+ deployments per day while maintaining zero-downtime releases through blue-green deployment strategies.

Mentored three junior developers, conducting weekly code reviews and architecture discussions that improved overall code quality and helped two team members progress to mid-level engineer positions.

Lead Full Stack Developer

CloudBridge Solutions Ltd

www.cloudbridgesolutions.co.uk

Reading, United Kingdom

June 2017 - February 2021

Designed and developed a multi-tenant SaaS platform using Python Django and Vue.js that onboarded 150+ enterprise customers, handling complex permission systems and data isolation requirements for regulated industries.

Managed migration of legacy monolithic application to AWS, leveraging Lambda, RDS, and CloudFront, reducing infrastructure costs by 35% annually while improving system reliability from 99.2% to 99.95% uptime.

Built real-time analytics engine using Apache Kafka and Elasticsearch that ingested logs from 500+ client applications, providing actionable insights to customers and generating significant competitive advantage.

Implemented automated testing framework achieving 87% code coverage, reducing production incidents by 60% and establishing quality standards that became the foundation for the engineering team's development practices.

Full Stack Developer

TechStart Digital

www.techstartdigital.net

London, United Kingdom

September 2010 - May 2017

Developed and maintained customer-facing web applications using Java Spring and Angular, supporting a growing user base of 100,000+ active users across multiple market verticals.

Created data pipeline infrastructure for extracting, transforming, and loading client data from various sources into a centralized data warehouse, enabling business intelligence and reporting capabilities.

Contributed to the transition from waterfall to agile methodologies, implementing Scrum practices and working with product managers to establish sprint cycles and sustainable development practices.

Worked across the full development lifecycle including requirements gathering, system design, implementation, testing, and production support, building strong cross-functional relationships with product and operations teams.

EDUCATION

Bachelor of Science in Computer Science

University of Oxford

Oxford, United Kingdom

2006 - 2010

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3

Frontend: React, Vue.js, Angular, Redux, Next.js

Backend: Node.js, Django, Spring Boot, Express

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud Platforms: AWS, Google Cloud Platform, Docker, Kubernetes

DevOps: GitHub Actions, Jenkins, GitLab CI, Terraform, CloudFormation

Tools and Platforms: Git, REST APIs, GraphQL, Apache Kafka, Linux, macOS

Architecture: Microservices, event-driven systems, CQRS, domain-driven design
