PROFESSIONAL SUMMARY

I'm a Staff Engineer with 8 years of experience building scalable distributed systems and leading technical initiatives across multiple organizations. I've spent most of my career focused on backend infrastructure, cloud architecture, and mentoring engineering teams to deliver high-quality software. I enjoy solving complex technical problems and collaborating with cross-functional teams to align technical decisions with business goals.

WORK EXPERIENCE

Senior Staff Engineer

TechVenture Solutions

Barcelona, Spain

techventure.io

January 2022 - Present

Led the design and implementation of a microservices migration project affecting 12 backend services, reducing latency by 40% and improving deployment frequency from monthly to daily cadence. Established engineering standards and best practices across the platform team, conducting code reviews and architecture discussions with 15+ engineers. Mentored 4 junior and mid-level engineers, guiding them through complex system design problems and career development milestones. Implemented observability infrastructure using Prometheus and ELK stack, enabling faster incident response with average MTTR reduced from 2 hours to 20 minutes.

Senior Backend Engineer

DataFlow Systems

Barcelona, Spain

dataflowsystems.com

June 2019 - December 2021

Built and maintained critical data pipeline infrastructure handling 500GB+ daily data ingestion from multiple sources, ensuring 99.95% availability SLA. Designed PostgreSQL optimization strategies and query improvements that reduced average query times by 55%, significantly improving application performance. Led the adoption of Kubernetes across engineering teams, automating deployment processes and reducing infrastructure costs by 30%. Collaborated with product and data science teams to implement feature flags and A/B testing infrastructure, enabling rapid experimentation and data-driven product decisions.

Backend Engineer

CloudSync Technologies

Madrid, Spain

cloudsync.co

March 2017 - May 2019

Developed RESTful APIs and backend services using Python and Go, handling millions of requests daily with sub-200ms response times. Implemented automated testing framework increasing code coverage from 45% to

85%, significantly reducing production defects. Participated in on-call rotation for critical production systems, responding to incidents and implementing post-mortem improvements. Optimized database queries and introduced caching strategies using Redis, reducing database load by 50% and improving user-facing latency.

EDUCATION

Master of Science in Computer Science

Universitat Politècnica de Catalunya (UPC)

Barcelona, Spain

Graduated: June 2016

Thesis: Distributed Consensus Algorithms in Cloud Computing

Bachelor of Science in Computer Science

Universitat Autònoma de Barcelona (UAB)

Barcelona, Spain

Graduated: June 2014

TECHNICAL SKILLS

Languages: Python, Go, Java, SQL, Bash, JavaScript

Cloud & Infrastructure: AWS, Google Cloud Platform, Kubernetes, Docker, Terraform, CI/CD Pipelines

Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra

Distributed Systems: Microservices Architecture, Event-Driven Systems, Message Queues, RabbitMQ, Kafka

Monitoring & Observability: Prometheus, Grafana, ELK Stack, Datadog, New Relic

Development Tools: Git, Jenkins, GitLab CI, Docker, Apache Spark

Methodologies: Agile, Scrum, System Design, Technical Leadership

GITHUB REPOSITORIES

github.com/marctorres/distributed-cache - High-performance distributed caching layer written in Go with consistent hashing and replication support

github.com/marctorres/api-gateway-service - Production-ready API gateway service with rate limiting, authentication, and request routing built with Python FastAPI

github.com/marctorres/kubernetes-deployment-tool - Terraform modules and automation tooling for managing multi-environment Kubernetes deployments on AWS

github.com/marctorres/data-pipeline-framework - Lightweight framework for building scalable ETL pipelines with support for multiple data sources and transformations
