PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 1 year of hands-on experience in cloud infrastructure and containerization. Passionate about automating deployment pipelines and improving system reliability. Quick learner with strong foundation in Linux administration and CI/CD practices. Seeking to expand expertise in Kubernetes orchestration and infrastructure-as-code methodologies.

WORK EXPERIENCE

Senior DevOps Architect

CloudPeak Technologies Ltd

Stockholm, Sweden

<https://cloudpeak-technologies.io>

March 2024 - Present

Architected and implemented multi-region cloud infrastructure supporting 15 microservices deployed across 50+ servers for enterprise clients

Led a team of 12 DevOps engineers and 8 infrastructure specialists, establishing best practices and mentoring junior staff members

Designed disaster recovery solutions achieving 99.99% uptime SLA with automated failover mechanisms and real-time monitoring

Reduced infrastructure costs by 40% through optimization strategies and negotiation of cloud provider contracts worth 2 million SEK annually

DevOps Engineer

Spotify AB

Stockholm, Sweden

<https://www.spotify.com>

January 2024 - February 2024

Deployed and maintained containerized applications using Docker and Kubernetes across development and staging environments

Implemented monitoring solutions using Prometheus and Grafana to track application performance metrics

Collaborated with backend teams to troubleshoot deployment issues and optimize CI/CD pipeline execution times

Wrote Bash scripts to automate routine infrastructure maintenance tasks and reduce manual operational overhead

Junior Infrastructure Technician

TechFlow Solutions

Nacka, Sweden

<https://techflow-solutions.net>

June 2023 - December 2023

Assisted with provisioning of virtual machines on VMware ESXi infrastructure and basic network configuration
Documented system configurations and created runbooks for common operational procedures
Monitored server logs and responded to alerts from Nagios monitoring system
Supported deployment of applications to on-premises Linux servers using manual processes and shell scripts

EDUCATION

Bachelor of Science in Computer Engineering
KTH Royal Institute of Technology
Stockholm, Sweden
Graduated: June 2023

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform
Containerization: Docker, Docker Compose
Orchestration: Kubernetes, basic cluster management
CI/CD Tools: Jenkins, GitLab CI, GitHub Actions
Infrastructure as Code: Terraform, Ansible
Scripting Languages: Bash, Python, Python scripting for automation
Databases: PostgreSQL, MySQL
Monitoring and Logging: Prometheus, Grafana, ELK Stack
Version Control: Git, GitHub, GitLab
Operating Systems: Linux (Ubuntu, CentOS), basic Windows Server
Web Servers: Nginx, Apache HTTP Server

PUBLIC REPOSITORIES

<https://github.com/erikbergstrom/docker-compose-templates>
Curated collection of Docker Compose configurations for development environments including WordPress, PostgreSQL, and Redis stacks

<https://github.com/erikbergstrom/kubernetes-manifests>
Kubernetes YAML manifests for deploying common applications with networking policies and persistent volume configurations

<https://github.com/erikbergstrom/terraform-aws-vpc>
Terraform modules for provisioning AWS Virtual Private Cloud infrastructure with subnets, security groups, and NAT gateways

<https://github.com/erikbergstrom/bash-automation-scripts>
Utility scripts for server provisioning, log rotation, and backup automation with error handling and logging

CERTIFICATIONS AND TRAINING

AWS Certified Cloud Practitioner - In Progress
Linux Academy: Kubernetes for Developers - Completed March 2024
Introduction to DevOps Practices - Coursera Certificate - June 2023
