PROFESSIONAL SUMMARY

Results-driven Staff Engineer with 6 years of progressive experience designing and implementing large-scale distributed systems across fintech and data analytics sectors. Proven track record of leading technical initiatives that drive operational excellence and innovation. Passionate about mentoring junior engineers and establishing best practices in cloud infrastructure, data engineering, and system architecture. Known for translating complex technical challenges into strategic business value.

WORK EXPERIENCE

Staff Engineer - DataStream Analytics Inc

Amsterdam, Netherlands

January 2022 - Present

Promoted to Staff Engineer after 18 months as Graduate Software Engineer, overseeing architectural decisions for enterprise data platforms serving 200+ clients globally. Led a team of 25 engineers across multiple business units while maintaining individual contributor responsibilities on core infrastructure projects. Implemented LangChain-based natural language query systems for real-time analytics dashboards, enabling non-technical users to generate insights from petabyte-scale datasets. Designed and deployed multi-cloud Kubernetes infrastructure supporting 40+ microservices with 99.99% uptime SLA.

Senior Data Engineer - Synapse Data Ltd (synapse-data.io)

Amsterdam, Netherlands

September 2019 - December 2021

Architected and maintained ETL pipelines processing 500GB of data daily using modern tools including dbt for transformation logic and sophisticated data orchestration frameworks. Managed migration of legacy on-premise data warehouse to cloud-native Snowflake environment, reducing infrastructure costs by 45% and improving query performance by 3x. Established CI/CD processes using GitHub Actions to automate testing and deployment of data transformations across staging and production environments. Mentored team of 5 junior engineers on software engineering best practices and Apache Spark optimization techniques.

Data Engineer - ING Netherlands (ing.nl)

Amsterdam, Netherlands

June 2018 - August 2019

Developed and optimized PySpark jobs for financial transaction analysis, processing billions of records monthly for fraud detection models. Built data quality frameworks and monitoring systems using Apache Airflow to ensure 99.9% data accuracy across critical business processes. Collaborated with business stakeholders to design dimensional models supporting advanced analytics and regulatory reporting requirements. Contributed to open-source projects and presented technical workshops on distributed computing concepts.

EDUCATION

Master of Science in Computer Science - University of Amsterdam

Amsterdam, Netherlands

Graduated: June 2018

Specialization: Distributed Systems and Big Data Processing

Bachelor of Science in Information Technology - University of Amsterdam

Amsterdam, Netherlands

Graduated: June 2016

TECHNICAL SKILLS

Languages: Python, Scala, SQL, Java, Bash

Big Data Technologies: Apache Spark, Apache Airflow, Kafka, Hadoop

Cloud Platforms: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform, Azure

Data Tools: dbt, Snowflake, Apache Hive, Presto, Tableau

Container Orchestration: Kubernetes, Docker, Helm

Databases: PostgreSQL, MongoDB, Cassandra, Redis

DevOps & Tools: Jenkins, GitHub Actions, Terraform, Ansible

Frameworks: PySpark, Pandas, NumPy, Scikit-learn

Other: HuggingFace Transformers, LangChain, Agile/Scrum, System Design
