PROFESSIONAL SUMMARY

I'm a Junior DevOps Engineer with 2 years of hands-on experience building and maintaining cloud infrastructure. I've worked on containerised applications, automated deployment pipelines, and monitoring systems that keep services running smoothly. I'm keen to expand my knowledge in Kubernetes and infrastructure-as-code while contributing to team projects and learning from more experienced engineers.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform (Compute Engine, Cloud Run)

Containerisation: Docker, Docker Compose

Orchestration: Kubernetes, Helm

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Version Control: Git, GitHub, GitLab

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Scripting: Bash, Python, Shell

Databases: PostgreSQL, MySQL, MongoDB

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

Other Tools: Nginx, Apache, Apache Kafka, RabbitMQ

WORK EXPERIENCE

DevOps Engineer

TechVenture Solutions

London, United Kingdom

www.techventuresolutions.io

March 2023 - Present

Designed and implemented CI/CD pipelines using GitLab CI that reduced deployment time by 40 percent, enabling the team to ship features faster with fewer manual interventions.

Managed and optimised AWS infrastructure for 15 microservices, maintaining 99.8 percent uptime and reducing monthly cloud costs by 25 percent through resource right-sizing and reserved instance planning.

Built comprehensive monitoring and alerting systems using Prometheus and Grafana, improving incident response time from 45 minutes to 8 minutes on average.

Mentored 2 junior team members on containerisation best practices and led knowledge-sharing sessions on Kubernetes deployments.

DevOps Engineer

CloudBase Innovations

London, United Kingdom

www.cloudbaseinnovations.co

August 2022 - February 2023

Containerised legacy monolithic applications into Docker containers, enabling deployment across multiple environments and reducing onboarding time for new developers from 3 days to 4 hours.

Automated infrastructure provisioning using Terraform and CloudFormation, creating reusable modules that reduced manual configuration work by 60 percent across the organisation.

Implemented centralized logging using ELK Stack, improving troubleshooting capabilities and reducing mean time to resolution for production issues by 35 percent.

Collaborated with development and operations teams to establish incident response procedures and conducted post-incident reviews to prevent recurring issues.

Junior Systems Administrator

DataFlow Networks Ltd

London, United Kingdom

www.dataflownetworks.net

June 2021 - July 2022

Supported the deployment and maintenance of applications on AWS and Google Cloud Platform, gaining foundational knowledge of cloud infrastructure and best practices.

Assisted in managing 50 virtual machines running Linux and Windows Server, performing regular updates, patches, and security hardening across production and staging environments.

Created and maintained Bash and Python scripts to automate repetitive system administration tasks, saving approximately 8 hours per week across the team.

Documented infrastructure configurations and runbooks, improving knowledge sharing and enabling faster issue resolution during on-call rotations.

EDUCATION

Bachelor of Science in Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2021

Grade: 2:1

GITHUB REPOSITORIES

github.com/jamesmitchell92/terraform-aws-k8s-cluster

Infrastructure as Code repository containing reusable Terraform modules for deploying production-grade Kubernetes clusters on AWS with networking, security groups, and monitoring.

github.com/jamesmitchell92/docker-python-microservices

Collection of containerised Python microservices demonstrating Docker best practices, multi-stage builds, and docker-compose orchestration for local development.

github.com/jamesmitchell92/prometheus-grafana-stack

Complete monitoring stack setup using Prometheus and Grafana with custom dashboards, alert rules, and documentation for monitoring applications at scale.

github.com/jamesmitchell92/cicd-pipeline-templates

Reusable GitLab CI and GitHub Actions pipeline templates for automated testing, building, and deployment of applications to Kubernetes clusters.
