PROFESSIONAL SUMMARY

Results-driven Staff Engineer with 8 years of progressive experience designing and implementing scalable distributed systems. Strong track record of leading cross-functional technical teams while mentoring junior engineers and establishing best practices. Passionate about solving complex architectural challenges and driving innovation through clean code and rigorous testing. Committed to building high-performance, resilient systems that deliver measurable business value.

WORK EXPERIENCE

Staff Engineer, Backend Infrastructure

TechVision Solutions

techvision.io

Paris, France

September 2022 - Present

Led the design and implementation of microservices architecture supporting 50+ internal services handling millions of daily requests with 99.99% uptime.

Established engineering standards and code review practices that reduced production incidents by 35% and improved deployment cycle time from 2 hours to 15 minutes.

Mentored team of 6 junior and mid-level engineers, conducting technical interviews and creating comprehensive onboarding documentation for new hires.

Architected and deployed Kubernetes-based container orchestration platform migrating 40 services from virtual machines, resulting in 30% cost reduction.

Senior Backend Engineer, Platform Team

DataCore Systems

www.datacore.com

Paris, France

January 2021 - August 2022

Designed and maintained distributed event streaming platform processing 2 million events per second using Apache Kafka and real-time analytics pipelines.

Implemented comprehensive monitoring and observability infrastructure using Prometheus and Grafana, enabling 24/7 production support with average incident resolution time of 45 minutes.

Developed critical data pipeline optimization that improved query performance by 60% and reduced database load across production environment.

Collaborated with 4 product teams to define API specifications and service contracts, ensuring seamless integration across 15+ dependent services.

Senior Software Engineer, Backend Services

CloudForge Technologies

www.cloudforge.net

Paris, France

March 2019 - March 2021

Developed RESTful APIs and microservices in Go and Python, establishing code quality standards that achieved 85% test coverage across all production services.

Implemented automated CI/CD pipelines using Jenkins and GitLab CI, reducing manual deployment steps by 80% and enabling 30+ deployments per week with zero-downtime releases.

Optimized database queries and implemented redis caching layer, improving API response times from 500ms to 120ms average latency for 3 critical endpoints.

Led migration of legacy monolithic application to microservices architecture over 18 months, resulting in improved scalability and reduced mean time to recovery.

EDUCATION

Master of Science in Computer Science

INSA Lyon (Institut National des Sciences Appliquées Lyon)

Lyon, France

2016

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, JavaScript, Bash

Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra

Cloud & DevOps: Kubernetes, Docker, AWS (EC2, S3, RDS, Lambda), Google Cloud Platform, Terraform, Jenkins, GitLab CI/CD

Architecture & Design: Microservices, Event-Driven Architecture, CQRS, Domain-Driven Design, System Design, Distributed Systems

Tools & Frameworks: gRPC, REST APIs, Apache Kafka, RabbitMQ, Prometheus, Grafana, ELK Stack, Git

Methodologies: Agile, Scrum, Test-Driven Development, Code Review Best Practices
