

# JAMES CHRISTOPHER MORGAN

Edinburgh, United Kingdom

Email: james.morgan@gmail.com

Phone: +34 621 847 592

LinkedIn: linkedin.com/in/jamesmorgan-backend

GitHub: github.com/jamesmorgan-dev

## PROFESSIONAL SUMMARY

Experienced backend engineer with 8 years of hands-on development building scalable distributed systems and microservices architectures. Proven track record of leading technical initiatives, mentoring junior developers, and delivering high-impact solutions in fast-paced environments. Strong expertise in cloud infrastructure, API design, and database optimization with a passion for clean code and system reliability.

## TECHNICAL SKILLS

Languages: Python, Java, Go, JavaScript, SQL

Frameworks & Libraries: Django, Spring Boot, FastAPI, Express.js

Databases: PostgreSQL, MongoDB, Redis, Elasticsearch

Cloud Platforms: AWS, Google Cloud Platform, Docker

Tools & Technologies: Kubernetes, Apache Kafka, RabbitMQ, Jenkins, Git

Architecture: Microservices, RESTful APIs, Event-driven systems, SOLID principles

Methodologies: Agile, CI/CD pipelines, Test-driven development

## WORK EXPERIENCE

Senior Backend Engineer

TechVenture Solutions Ltd

Edinburgh, United Kingdom

Mar 2021 - Present

Architected and implemented a microservices platform serving 2 million+ daily active users, resulting in 40% reduction in system latency and improved overall application performance across multiple services.

Led a team of 4 junior developers, conducting code reviews, establishing best practices, and mentoring team members in distributed system design patterns and advanced Python techniques.

Designed and deployed a real-time data processing pipeline using Apache Kafka and Spark that reduced reporting latency from hours to minutes, enabling faster business intelligence insights.

Implemented comprehensive monitoring and observability solutions using Prometheus and Grafana, reducing mean time to detection of production issues by 65% and improving incident response times.

Backend Software Engineer

DataFlow Systems

Edinburgh, United Kingdom

Jan 2018 - Feb 2021

Developed and maintained multiple RESTful APIs handling 500+ requests per second using Django and PostgreSQL, ensuring 99.95% uptime through load balancing and database optimization techniques.

Migrated legacy monolithic application to microservices architecture using Docker and Kubernetes, reducing deployment time from 2 hours to 15 minutes and improving system scalability.

Optimized database queries and implemented intelligent caching strategies with Redis, achieving 50% reduction in database load and significant improvement in API response times.

Collaborated with cross-functional teams including frontend engineers and product managers to define API contracts and ensure seamless integration across multiple services.

Junior Backend Developer

Nexus Digital Ltd

Edinburgh, United Kingdom

Aug 2015 - Dec 2017

Built backend services for customer-facing applications using Java and Spring Boot, contributing to features serving hundreds of thousands of monthly active users across web and mobile platforms.

Participated in agile development cycles with 2-week sprints, delivering features on time and maintaining code quality standards through peer reviews and automated testing.

Implemented unit and integration tests achieving 85% code coverage, identifying and fixing bugs early in the development cycle and improving overall application reliability.

Assisted in setting up CI/CD pipelines using Jenkins and Git, automating deployment processes and enabling the team to release updates multiple times per week.

## EDUCATION

---

Bachelor of Science in Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated: Jun 2015

## PUBLIC REPOSITORIES

---

[github.com/jamesmorgan-dev/api-gateway](https://github.com/jamesmorgan-dev/api-gateway) - Lightweight Go-based API gateway with rate limiting and request routing for microservices

[github.com/jamesmorgan-dev/task-scheduler](https://github.com/jamesmorgan-dev/task-scheduler) - Distributed task scheduling system built with Python and Celery

[github.com/jamesmorgan-dev/cache-layer](https://github.com/jamesmorgan-dev/cache-layer) - Redis abstraction layer for seamless caching integration in Python applications

[github.com/jamesmorgan-dev/log-aggregator](https://github.com/jamesmorgan-dev/log-aggregator) - Centralized logging solution using Elasticsearch and Logstash

## ADDITIONAL INFORMATION

---

Languages: English (native), Spanish (conversational)

Certifications: AWS Solutions Architect Associate, Kubernetes Application Developer
