PROFESSIONAL SUMMARY

Results-driven Principal Engineer with 8 years of progressive experience in software architecture, cloud infrastructure, and leading high-performing engineering teams. Proven track record designing and delivering scalable systems for enterprises across financial services and e-commerce sectors. Strong advocate for clean code, continuous improvement, and fostering collaborative engineering cultures. Seeking to drive technical excellence and innovation within a forward-thinking organisation.

WORK EXPERIENCE

Principal Engineer

CoreTech Solutions (Previously known as DataVault Systems) | Glasgow, UK

www.coretechsolutions.com

January 2022 - Present

Led architectural decisions for microservices migration affecting 15+ engineering teams across three regions, reducing system latency by 40 percent and improving deployment frequency from monthly to weekly cycles. Mentored 6 junior and mid-level engineers, establishing coding standards and conducting design reviews that elevated code quality metrics by 35 percent. Spearheaded adoption of event-driven architecture patterns, implementing Apache Kafka for real-time data processing across 12 services handling 500,000 transactions daily. Collaborated with product and security leadership to establish non-functional requirements framework, ensuring new features met performance and compliance benchmarks before development.

Senior Software Architect

FinanceFlow Systems | Edinburgh, UK

www.financeflowsystems.io

July 2018 - December 2021

Architected distributed payment processing platform handling 50 million GBP in annual transaction volume, achieving 99.95 percent uptime through redundancy and graceful degradation strategies. Owned full technology stack decisions including database optimisation, leading team through successful migration from monolithic PostgreSQL to polyglot persistence approach with Redis caching layer. Established CI/CD pipeline using Jenkins and Docker, reducing manual deployment overhead by 80 percent and enabling zero-downtime releases. Worked directly with CTO and external auditors to design and implement security controls meeting PCI DSS Level 1 compliance requirements.

Senior Software Engineer

Nexus Digital Ltd | Glasgow, UK

www.nexusdigital.co.uk

August 2015 - June 2018

Developed scalable e-commerce platform backend serving 2 million active users across UK and Europe, building RESTful APIs in Java and Python that processed 10,000 requests per second during peak load periods. Led team of 4 engineers in implementing robust inventory management system with eventual consistency model, reducing

stock discrepancies by 92 percent across distributed warehouse locations. Implemented comprehensive monitoring and alerting infrastructure using ELK Stack, reducing mean time to detection for critical incidents from 45 minutes to 8 minutes. Participated in on-call rotation and incident command, leading postmortems and implementing systemic improvements to prevent recurrence.

EDUCATION

Bachelor of Science in Computer Science

University of Glasgow, Scotland

Graduated: June 2015

Grade: Upper Second Class Honours (2:1)

SKILLS

Programming Languages: Java, Python, Go, SQL, JavaScript

Cloud and Infrastructure: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform, Docker, Linux Administration

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Advanced Technologies: Kubernetes, Terraform, ArgoCD, Service Mesh Architecture

DevOps and Tools: Jenkins, GitLab CI/CD, Prometheus, Grafana, Apache Kafka

Software Architecture: Microservices, Event-Driven Systems, Domain-Driven Design, SOLID Principles

Leadership: Technical mentoring, cross-functional collaboration, architectural decision-making, team scaling
