Location: London, UK

PROFESSIONAL SUMMARY

Results-driven Machine Learning Engineer with 8 years of progressive experience building and deploying scalable ML systems in production environments. Specialized in deep learning, NLP, and computer vision with a proven track record of delivering high-impact solutions for enterprise clients. Known for combining technical excellence with strong cross-functional collaboration skills and a passion for solving complex business problems through data-driven approaches.

WORK EXPERIENCE

Graduate Machine Learning Developer

TechVision Analytics

London, UK

January 2016 - June 2017

Developed and trained initial machine learning models for customer segmentation using K-means and hierarchical clustering algorithms. Collaborated with senior engineers to implement data preprocessing pipelines for cleaning unstructured text data from social media sources. Directly managed and mentored a team of 24 data scientists and engineers across three continental offices. Led the architectural design and deployment of a distributed TensorFlow-based recommendation system serving 2 million daily predictions.

Senior ML Engineer

NeuralCore Solutions

www.neuralcore.io

Stockholm, Sweden

July 2017 - November 2019

Architected end-to-end machine learning pipeline for real-time anomaly detection in IoT sensor networks processing 500M+ data points daily. Designed and implemented advanced neural network architectures including attention mechanisms and transformer-based models for time series forecasting. Reduced model inference latency by 67 percent through quantization and optimization techniques. Established ML best practices and code review standards that improved team productivity and model reliability across all production systems.

Principal ML Research Scientist

DataFlow Innovations

www.dataflow.net

Stockholm, Sweden

December 2019 - Present

Lead research initiatives in federated learning and differential privacy applied to sensitive healthcare datasets across multiple European institutions. Developed proprietary feature engineering frameworks that increased model accuracy by 23 percent while maintaining sub-100ms inference latency. Published three peer-reviewed papers on deep reinforcement learning applications and contributed to two open-source ML libraries. Conducted weekly technical workshops and mentored junior team members on advanced topics including Bayesian optimization and

causal inference methodologies.

EDUCATION

Master of Science in Machine Learning

Royal Institute of Technology (KTH)

Stockholm, Sweden

2014

Bachelor of Science in Computer Science

Uppsala University

Uppsala, Sweden

2012

TECHNICAL SKILLS

Machine Learning Frameworks: TensorFlow, PyTorch, Scikit-learn, XGBoost, LightGBM, Keras

Deep Learning: Convolutional Neural Networks, Recurrent Neural Networks, Transformer Models, Attention Mechanisms, Generative Adversarial Networks

Natural Language Processing: BERT, GPT, Word2Vec, SpaCy, NLTK, Hugging Face Transformers

Computer Vision: OpenCV, Image Classification, Object Detection, Semantic Segmentation, YOLO

Data Processing: Apache Spark, Pandas, NumPy, Dask, SQL, BigQuery

Cloud Platforms: Google Cloud Platform, AWS SageMaker, Azure ML

Programming Languages: Python, Java, Scala, SQL, R

MLOps and Deployment: Docker, Kubernetes, Jenkins, Apache Airflow, Model Serving, A/B Testing

Advanced Techniques: Reinforcement Learning, Bayesian Optimization, Transfer Learning, Ensemble Methods, Feature Engineering
