PROFESSIONAL SUMMARY

Results-driven Principal Engineer with a highly motivated approach to spearheading cutting-edge technological solutions and delivering actionable insights through cross-functional collaboration. Proven track record of championing mission-critical initiatives by leveraging innovative methodologies to synergistically align with organisational objectives. Dynamic professional passionate about data-driven decision making and leveraging emerging technologies to drive organisational success whilst maintaining commitment to operational excellence and delivering measurable value.

WORK EXPERIENCE

Principal Engineer, CloudVault Systems

cloudvaultsystems.io

Madrid, Spain

March 2021 - Present

Led architecture and design of microservices-based infrastructure serving over 2 million concurrent users, resulting in 40% improvement in system scalability and 99.99% uptime achievement

Spearheaded migration of legacy monolithic applications to containerized Kubernetes environments, reducing deployment time from 2 hours to 15 minutes and cutting infrastructure costs by 35%

Established and mentored cross-functional engineering team of 12 engineers, implementing best practices for code quality, security standards, and continuous integration/continuous deployment pipelines

Championed enterprise-wide adoption of infrastructure-as-code methodologies using Terraform and Ansible, standardizing deployment processes across 50+ microservices

Senior Staff Engineer, DataStream Innovations

datastreaminnovations.net

Madrid, Spain

June 2017 - February 2021

Designed and implemented real-time data processing platform handling 500TB of daily analytics, enabling executives to make actionable business decisions within minutes rather than days

Led technical due diligence for three major acquisitions, evaluating technology stacks and identifying integration risks, ultimately contributing to successful mergers valued at combined 150 million euros

Architected comprehensive disaster recovery and business continuity solutions across multi-region cloud deployments, reducing recovery time objective from 4 hours to 15 minutes

Directed security hardening initiatives implementing zero-trust architecture principles, achieving SOC2 Type II compliance and reducing security incidents by 89%

Lead Infrastructure Engineer, Telefonica

www.telefonica.com

Madrid, Spain

September 2012 - May 2017

Redesigned core telecommunications infrastructure supporting 25 million subscribers, implementing software-defined networking that reduced operational expenses by 28% annually

Managed team of 8 engineers responsible for maintaining and optimizing 200+ production servers across multiple data centers with guaranteed SLA of 99.95%

Implemented comprehensive monitoring and observability solutions using Prometheus and ELK Stack, reducing mean time to resolution for incidents from 90 minutes to 20 minutes

Pioneered adoption of DevOps practices within legacy operations organization, establishing automated testing frameworks and continuous deployment pipelines for critical systems

EDUCATION

Master of Science in Computer Science

Universidad Politecnica de Madrid

Madrid, Spain

2010 - 2012

Bachelor of Science in Computer Engineering

Universidad Carlos III de Madrid

Madrid, Spain

2006 - 2010

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Orchestration: Kubernetes, Docker, Docker Swarm

Infrastructure as Code: Terraform, Ansible, CloudFormation

Programming Languages: Java, Python, Go, C++, Bash

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Monitoring and Observability: Prometheus, Grafana, ELK Stack, DataDog

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, CircleCI

Networking: TCP/IP, DNS, Load Balancing, SDN, BGP

Security: SSL/TLS, IAM, RBAC, Zero Trust Architecture, Security Hardening

Message Queues: RabbitMQ, Apache Kafka, AWS SQS
