PROFESSIONAL SUMMARY

I am a Junior DevOps Engineer with 2 years of hands-on experience in cloud infrastructure and deployment automation. I have a strong foundation in Linux administration, containerization, and CI/CD pipeline development. I'm passionate about improving system reliability and automating repetitive tasks to enable development teams to deliver faster. I'm eager to expand my expertise in modern DevOps practices while contributing to meaningful infrastructure projects.

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure

Containerization: Docker

CI/CD Tools: Jenkins, GitLab CI

Infrastructure as Code: Terraform, CloudFormation

Orchestration: Kubernetes, ArgoCD

Monitoring and Logging: Prometheus, ELK Stack, Grafana

Scripting Languages: Bash, Python

Version Control: Git, GitHub

Databases: PostgreSQL, MySQL

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

WORK EXPERIENCE

DevOps Engineer

TechVenture Solutions

Copenhagen, Denmark

www.techventuresolutions.io

January 2023 - Present

- Maintained and optimized AWS EC2 instances running production applications, reducing infrastructure costs by 18% through instance right-sizing and spot instance utilization
- Built and maintained Docker containerized applications for microservices architecture, improving deployment consistency across development and production environments
- Developed and improved CI/CD pipelines using GitLab CI to automate build, test, and deployment processes, reducing deployment time from 45 minutes to 12 minutes
- Created comprehensive monitoring dashboards using Prometheus and Grafana to track system performance metrics and alert on anomalies

Junior DevOps Engineer

CloudCore Infrastructure

Copenhagen, Denmark

www.cloudcoreinfra.co

August 2022 - December 2022

- Assisted senior engineers in managing AWS infrastructure for multiple clients, including VPC configuration, security groups, and IAM policy implementation
- Wrote and maintained Bash scripts to automate routine operational tasks such as log rotation, backup verification, and server health checks
- Implemented ELK Stack for centralized logging across 15+ application servers, improving troubleshooting efficiency by 40%
- Participated in on-call rotation supporting production systems, responding to alerts and implementing emergency fixes

Systems Administrator

NetCore Solutions

Copenhagen, Denmark

www.netcoresolutions.net

June 2021 - July 2022

- Managed Linux-based servers in a hybrid cloud environment, performing system updates, security patches, and performance tuning
- Deployed and configured Jenkins CI/CD pipelines for automated testing and deployment of Java applications
- Provided technical support to development teams in troubleshooting deployment issues and environment configuration problems
- Documented infrastructure changes and created runbooks for common operational procedures

EDUCATION

Bachelor of Science in Information Technology

IT University of Copenhagen

Copenhagen, Denmark

Graduated: June 2021

Relevant Coursework: Cloud Computing, Linux Administration, Network Architecture, Database Management

GITHUB REPOSITORIES

github.com/magnusandersen92/jenkins-pipeline-templates

Reusable Jenkins pipeline templates for automated CI/CD workflows with Docker integration and automated testing stages.

github.com/magnusandersen92/bash-automation-scripts

Collection of Bash scripts for Linux system administration, including backup automation, log rotation, and monitoring utilities.

github.com/magnusandersen92/docker-microservices

Docker Compose configurations for local development of multi-container microservices applications with PostgreSQL and Redis.

github.com/magnusandersen92/aws-infrastructure-templates

CloudFormation templates for provisioning common AWS infrastructure patterns including VPCs, security groups, and RDS instances.

CERTIFICATIONS

AWS Certified Cloud Practitioner

Issued: March 2022

Docker Essentials Certification

Issued: November 2021
