PROFESSIONAL SUMMARY

Highly experienced Data Analyst with 12 years of progressive expertise in business intelligence, data visualization, and analytics strategy. Proven track record of delivering actionable insights that drive business decisions across multiple sectors. Skilled at translating complex data into meaningful narratives for stakeholders at all levels. Looking to leverage extensive experience in a senior analytical role where strategic data leadership is valued.

WORK EXPERIENCE

Staff Data Analyst

Quantum Analytics Solutions

www.quantumanalytics.io

Leeds, United Kingdom

March 2021 - Present

Led the development of enterprise-wide reporting dashboards serving 200+ internal stakeholders across finance and operations divisions. Established data governance frameworks and implemented standardized metrics definitions reducing reporting discrepancies by 45%. Mentored junior analysts on SQL optimization and designed training programmes for Power BI adoption across the organization. Collaborated with C-suite executives to translate business requirements into analytical roadmaps, directly influencing annual strategy.

Senior Data Analyst

DataFlow Insights Ltd

www.dataflowinsights.co

Manchester, United Kingdom

June 2017 - February 2021

Managed end-to-end analytics projects involving collection, transformation, and visualization of datasets exceeding 500 million records. Created advanced Excel models and SQL queries to support pricing strategy decisions resulting in 12% revenue uplift. Automated monthly reporting processes using Python scripts, reducing manual work by 30 hours monthly. Presented insights to board-level stakeholders quarterly, with emphasis on market trends and competitive positioning.

Data Analyst

Insight Partners

<https://www.insightpartners.com>

London, United Kingdom

July 2012 - May 2017

Developed and maintained analytical dashboards tracking key performance indicators across sales, marketing, and customer success functions. Conducted statistical analysis on customer behaviour datasets to identify retention opportunities, contributing to 8% increase in customer lifetime value. Built complex pivot tables and vlookup models to support ad-hoc reporting requests from department heads. Extracted data from multiple operational systems using SQL and created monthly business reviews for senior management.
