PROFESSIONAL SUMMARY

Experienced DevOps Engineer with 5 years of hands-on expertise in cloud infrastructure, containerization, and CI/CD pipeline automation. Proven track record of designing and maintaining scalable systems for high-traffic applications across AWS and Kubernetes environments. Strong background in infrastructure-as-code practices and monitoring solutions. Seeking to leverage technical expertise in a challenging role that drives operational excellence and system reliability.

WORK EXPERIENCE

Senior DevOps Engineer

OVH | Paris, France

January 2023 - Present

Designed and implemented a multi-region Kubernetes infrastructure supporting 15+ microservices, reducing deployment time from 45 minutes to 8 minutes through automated CI/CD pipelines using GitLab CI and ArgoCD.

Established comprehensive monitoring and alerting systems using Prometheus, Grafana, and ELK stack, decreasing mean time to detection of critical issues from 30 minutes to 5 minutes.

Mentored 2 junior engineers on DevOps best practices including containerization, infrastructure-as-code with Terraform, and Kubernetes orchestration, contributing to team skill development and knowledge sharing.

Architected disaster recovery and backup strategies using AWS S3, AWS Backup, and custom Python scripts, achieving 99.95% data availability and enabling point-in-time recovery capabilities.

DevOps Engineer

Synapse Data Ltd | Paris, France

August 2021 - December 2022

(Previously known as CloudPeak Innovations Ltd)

Built and maintained automated deployment pipelines using Jenkins and Docker, enabling development teams to deploy code to production 20+ times daily with zero-downtime releases using blue-green deployment strategies.

Optimized cloud infrastructure costs by 35% through AWS resource analysis, implementation of reserved instances, spot instances, and rightsizing recommendations across 50+ EC2 instances.

Implemented Infrastructure-as-Code using Terraform for 100% reproducible infrastructure deployments across development, staging, and production environments, reducing provisioning time by 60%.

Configured and managed centralized logging solution using Elasticsearch, Logstash, and Kibana for application debugging and compliance auditing across 8 microservices.

DevOps Engineer

Société Générale | La Défense, France

March 2019 - July 2021

Deployed and maintained OpenShift clusters supporting containerized banking applications, managing 200+ pods across 15 nodes while ensuring 99.99% uptime for mission-critical systems.

Developed Python and Bash automation scripts to streamline infrastructure provisioning, configuration management, and system maintenance tasks, reducing manual operational overhead by 40%.

Managed VMware vSphere virtualization infrastructure for legacy systems, including VM provisioning, performance tuning, and capacity planning for 500+ virtual machines.

Implemented HashiCorp Vault for secrets management across development, staging, and production environments, ensuring compliance with banking security standards and reducing credential rotation time from manual process to automated 30-day cycles.

EDUCATION

Master's Degree in Computer Science - Cloud Systems and Distributed Architecture

Université Pierre et Marie Curie (Sorbonne Université) | Paris, France

Graduated: June 2019

Bachelor's Degree in Computer Science

Institut Polytechnique de Paris | Paris, France

Graduated: June 2017

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, Lambda, CloudFormation), Google Cloud Platform, Microsoft Azure

Container & Orchestration: Docker, Kubernetes, Docker Compose, OpenShift, Helm

Infrastructure-as-Code: Terraform, CloudFormation, Ansible, Vagrant

CI/CD Tools: GitLab CI, Jenkins, GitHub Actions, ArgoCD, HashiCorp Vault

Monitoring & Logging: Prometheus, Grafana, ELK Stack, Datadog, New Relic, CloudWatch

Databases: PostgreSQL, MySQL, MongoDB, Redis, Amazon RDS

Programming Languages: Python, Bash, Go, JavaScript (Node.js)

Version Control: Git, GitHub, GitLab, Bitbucket

Operating Systems: Linux (Ubuntu, CentOS, RHEL), Windows Server

Web Servers: Nginx, Apache, HAProxy

Virtualization: VMware vSphere, Hyper-V, KVM

GITHUB REPOSITORIES

kubernetes-deployment-toolkit: Comprehensive Terraform and Helm charts for deploying production-grade Kubernetes clusters on AWS with monitoring and logging stack integration. 287 stars, 45 forks.

cicd-automation-suite: Collection of Jenkins pipelines and scripts for automated testing, building, and deployment of microservices with Docker containerization. 156 stars, 38 forks.

infrastructure-cost-optimizer: Python-based AWS infrastructure analyzer that identifies optimization opportunities and calculates potential cost savings across compute, storage, and database resources. 93 stars, 21 forks.

linux-sysadmin-scripts: Bash and Python scripts for common Linux system administration tasks including backup automation, log rotation, security hardening, and performance monitoring. 67 stars, 18 forks.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | Amazon Web Services | 2022

Kubernetes Application Developer (CKAD) | Cloud Native Computing Foundation | 2021

HashiCorp Certified: Terraform Associate | HashiCorp | 2020

LANGUAGES

French: Native

English: Fluent (Professional working proficiency)

German: Basic
