PROFESSIONAL SUMMARY

Results-driven Machine Learning Engineer with 3 years of hands-on experience developing and deploying predictive models in production environments. Proven expertise in building scalable ML pipelines, data preprocessing, and implementing advanced deep learning architectures. Seeking to leverage strong foundation in Python, TensorFlow, and cloud technologies to drive innovation in AI-driven solutions while continuing to grow technical expertise in real-world applications.

WORK EXPERIENCE

Senior Machine Learning Engineer

DataFlow Systems AB

<https://www.dataflowsystems.io>

Stockholm, Sweden

January 2023 - Present

Architected and led implementation of company-wide ML platform serving 15 machine learning engineers and 40+ data scientists across multiple departments and business units

Developed production ML pipelines using LangChain for NLP tasks, achieving 34% improvement in inference latency and processing 2.5 million documents monthly

Implemented automated feature engineering framework using Airflow that reduced manual feature creation time by 60% and improved model reproducibility across teams

Led quarterly ML strategy sessions with C-level executives, defining roadmap for AI initiatives and securing budget allocation of 2.3 million SEK for infrastructure expansion

Machine Learning Engineer

TensorFlow Analytics

<https://www.tensorflowanalytics.co>

Stockholm, Sweden

March 2021 - December 2022

Engineered end-to-end recommendation system using collaborative filtering and gradient boosting, deployed to production serving 500K daily active users with 92% uptime

Implemented LangChain-based chatbot prototype for customer service automation, reducing response time by 45% and handling 10K conversations per week

Built comprehensive data validation pipeline with Great Expectations, catching data quality issues before they affected downstream models and reducing production incidents by 75%

Collaborated with cross-functional teams including product and engineering to establish ML best practices and contributed to 8 peer-reviewed papers on model optimization

Junior ML Engineer

CloudML Innovations

<https://www.cloudmlinnovations.net>

Stockholm, Sweden

June 2019 - February 2021

Developed and trained multiple deep learning models using HuggingFace Transformers for text classification tasks with 87% accuracy on benchmark datasets

Optimized batch processing workflows using GitHub Actions CI/CD pipeline, reducing model training time from 12 hours to 3 hours and enabling faster experimentation cycles

Preprocessed and analyzed datasets of 50GB+ using Pandas and NumPy, identifying patterns that improved model performance by 22%

Supported senior engineers in deploying models to AWS SageMaker and maintained monitoring dashboards using CloudWatch for production model performance tracking

EDUCATION

Master of Science in Machine Learning

KTH Royal Institute of Technology, Stockholm, Sweden

Graduated: June 2019

Thesis: Deep Learning Approaches for Swedish Language Understanding

Bachelor of Science in Computer Science

Uppsala University, Sweden

Graduated: June 2017

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, Bash

Machine Learning Frameworks: TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost

NLP Libraries: HuggingFace Transformers, LangChain, NLTK, SpaCy

Data Processing: Pandas, NumPy, Spark, Apache Airflow, dbt

Cloud Platforms: AWS (SageMaker, EC2, S3), Google Cloud Platform

Tools & Platforms: Jupyter, Docker, Git, GitHub Actions, MLflow, Weights & Biases

Databases: PostgreSQL, MongoDB, DynamoDB

Version Control: Git, GitHub

CERTIFICATIONS

AWS Certified Machine Learning - Specialty (2022)

Professional Data Engineer - Google Cloud (2021)
