PROFESSIONAL SUMMARY

Results-driven Senior Machine Learning Engineer with 7 years of progressive experience developing and deploying ML solutions across fintech and enterprise sectors. Proven track record of architecting end-to-end machine learning pipelines and leading cross-functional teams to deliver high-impact AI projects. Passionate about leveraging advanced statistical methods and deep learning frameworks to solve complex business problems and drive data-driven decision making.

WORK EXPERIENCE

Senior Machine Learning Engineer

Veridian Solutions Ltd

www.veridian-solutions.io

Liverpool, United Kingdom

September 2021 - Present

Designed and implemented a fraud detection system processing 2 million daily transactions, achieving 94% precision and reducing false positives by 38% through ensemble modeling techniques

Led a team of 3 junior ML engineers in developing automated feature engineering pipelines using Python and Pandas, reducing model development cycle time from 8 weeks to 3 weeks

Deployed computer vision models for document classification achieving 97% accuracy across 50 document types, processing 500,000 documents monthly in production environment

Established MLOps best practices including experiment tracking, model versioning, and automated model monitoring dashboards for 12 active ML models

Machine Learning Engineer

DataForge Innovations

www.dataforge-innovations.net

Manchester, United Kingdom

June 2019 - August 2021

Built and optimized XGBoost and LightGBM models for customer churn prediction, improving recall by 16% and saving the company 2.3 million pounds in retained revenue annually

Developed time series forecasting models using ARIMA and Prophet for inventory optimization across 200 retail locations, reducing stockout incidents by 22%

Created data pipelines in PySpark to process 5TB of customer behavioral data daily, enabling real-time personalization features for 2 million active users

Collaborated with product teams to A/B test machine learning recommendations, iterating through 15 model versions and achieving 8% increase in user engagement

Senior Machine Learning Engineer

JP Morgan Chase

www.jpmorgan.com

Liverpool, United Kingdom

August 2017 - May 2019

Developed credit risk models using gradient boosting techniques that improved loan approval accuracy by 12% while maintaining regulatory compliance with Basel III requirements

Implemented natural language processing pipelines to analyze 50,000 customer service interactions daily, extracting sentiment and intent with 91% accuracy for downstream classification

Optimized model inference latency from 2.3 seconds to 340ms through quantization and pruning techniques, enabling real-time decision making in customer onboarding flows

Mentored 4 junior data scientists on machine learning fundamentals and conducted weekly technical knowledge sharing sessions on advanced deep learning architectures

EDUCATION

MSc Machine Learning

University of Manchester

Manchester, United Kingdom

Graduated September 2017

BSc Computer Science

University of Liverpool

Liverpool, United Kingdom

Graduated June 2015

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Scala, Java

Machine Learning Frameworks: TensorFlow, PyTorch, Scikit-learn, XGBoost, LightGBM, CatBoost, Keras

Data Processing: Apache Spark, Pandas, NumPy, PySpark, Dask

Cloud Platforms: AWS (SageMaker, EC2, S3), Google Cloud Platform (Vertex AI), Azure Machine Learning

Container and Orchestration: Docker, Kubernetes, ArgoCD

Infrastructure as Code: Terraform, CloudFormation, Ansible

Big Data Technologies: Hadoop, Hive, Kafka, Apache Flink

Databases: PostgreSQL, MongoDB, Cassandra, Elasticsearch

Statistical Methods: Hypothesis Testing, Bayesian Inference, Time Series Analysis, Experimental Design

Deep Learning: CNNs, RNNs, Transformers, GANs, Transfer Learning

Natural Language Processing: NLTK, spaCy, Hugging Face Transformers, BERT, GPT Fine-tuning

Computer Vision: OpenCV, Image Segmentation, Object Detection, YOLO

Model Evaluation: Cross-validation, ROC-AUC, Precision-Recall, Feature Importance Analysis
