PROFESSIONAL SUMMARY

Accomplished Machine Learning Engineer with 12 years of progressive experience building scalable ML systems and leading cross-functional teams through complex data challenges. Specialized in deep learning, computer vision, and production ML infrastructure. Known for delivering high-impact solutions that drive business value while mentoring junior engineers and establishing best practices across organizations. Passionate about bridging the gap between research and production systems.

WORK EXPERIENCE

Senior Machine Learning Engineer

TensorFlow Labs

www.tensorflowlabs.io

Amsterdam, Netherlands

August 2021 - Present

Led the development of production ML pipelines processing 2 billion daily events, achieving 40% reduction in latency through optimized inference serving. Architected LangChain-based NLP systems for real-time document classification and semantic search across enterprise knowledge bases. Established ML monitoring framework using advanced observability tools resulting in 99.97% model uptime. Mentored team of 12 machine learning engineers and data scientists on ML best practices and production deployment patterns.

Junior Machine Learning Engineer

DataViz Innovations

www.datavizinnovations.net

Amsterdam, Netherlands

March 2019 - July 2021

Implemented HuggingFace Transformers models for sentiment analysis and named entity recognition tasks in production environment. Led migration of legacy batch processes to real-time streaming pipelines using Kafka and PySpark. Managed cross-functional initiatives between data science and backend engineering teams consisting of 35+ professionals across three continents. Developed automated feature engineering pipelines that reduced model training time by 55% and improved model accuracy by 8 percentage points.

Graduate Data Scientist

Quantum Analytics Group

Amsterdam, Netherlands

June 2012 - February 2019

Directed department of 50 data scientists and analysts while establishing data strategy for enterprise clients in financial services sector. Built recommendation engine using collaborative filtering techniques that increased user engagement by 32% and generated 2.3 million euros in additional revenue. Implemented dbt transformations and automated data warehouse pipelines for 200+ dimensional models serving business intelligence and analytics teams. Created end-to-end computer vision pipeline using convolutional neural networks for document processing and OCR, reducing manual data entry by 89%.

EDUCATION

Master of Science in Artificial Intelligence

University of Amsterdam (UvA)

Amsterdam, Netherlands

Graduated: June 2012

Bachelor of Science in Computer Science

Utrecht University

Utrecht, Netherlands

Graduated: June 2010

TECHNICAL SKILLS

Machine Learning: Deep Learning, Neural Networks, Computer Vision, Natural Language Processing, Recommendation Systems, Reinforcement Learning, Transfer Learning, Time Series Analysis

Data Technologies: Python, PySpark, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, SQL, Kafka, Apache Spark

MLOps and Infrastructure: Docker, Kubernetes, TensorFlow Serving, BentoML, Apache Airflow, Feature Stores, Model Registry, ML Monitoring

Cloud Platforms: Google Cloud Platform, AWS, Azure

Other Tools: Git, Jupyter Notebooks, Tableau, Advanced Statistics, Experimental Design, A/B Testing

LANGUAGES

Dutch (Native)

English (Fluent)

German (Intermediate)
