PROFESSIONAL SUMMARY

Data scientist with 8 years of experience building machine learning systems that solve real business problems. I've spent the last four years leading data teams at growth-stage tech companies, moving beyond analysis to ship models that directly impact revenue and user experience. I'm particularly interested in recommendation systems and time series forecasting, and I enjoy mentoring junior data scientists through their first production deployments.

WORK EXPERIENCE

Senior Data Scientist

DataFlow Analytics

Amsterdam, Netherlands

dataflowanalytics.io

January 2022 - Present

Led the development of a customer churn prediction model that identified at-risk accounts with 87% precision, directly contributing to a 12 million EUR revenue retention initiative. Designed and implemented a real-time recommendation engine using collaborative filtering that increased cross-sell revenue by 18% within six months. Built an end-to-end MLOps pipeline using Docker and Kubernetes, reducing model deployment time from two weeks to two hours and enabling faster experimentation cycles. Mentored three junior data scientists on best practices in feature engineering, model validation, and production monitoring.

Data Scientist

TechVenture Solutions

Amsterdam, Netherlands

techventuresolutions.net

June 2018 - December 2021

Developed machine learning models for predictive maintenance that reduced equipment downtime by 23% for manufacturing clients. Created an automated reporting dashboard in Python that consolidated data from fifteen different sources, saving the analytics team approximately 40 hours per month. Collaborated with product managers to implement A/B testing frameworks for five major feature releases, resulting in data-driven decisions that improved user retention by 15%. Established data quality standards and implemented automated data validation checks that caught issues before they reached production.

Data Analyst

Insight Partners

Rotterdam, Netherlands

insightpartners.co

September 2016 - May 2018

Analyzed customer behavior patterns using SQL and Python to identify market segments, leading to a successful product pivot that targeted high-value users. Built interactive visualizations using Tableau and Power BI that helped

executives understand complex datasets and make faster strategic decisions. Developed predictive models for sales forecasting using time series analysis, achieving MAPE of 8.5% across quarterly predictions. Automated data extraction and transformation processes using Python scripts, reducing manual reporting work by 30 hours per week.

EDUCATION

MSc Data Science

University of Amsterdam

Amsterdam, Netherlands

2014 - 2016

BSc Statistics

University of Amsterdam

Amsterdam, Netherlands

2011 - 2014

TECHNICAL SKILLS

Programming Languages: Python, SQL, R, Scala

Machine Learning: Scikit-learn, TensorFlow, PyTorch, XGBoost, Gradient Boosting, Neural Networks, Recommendation Systems, Time Series Forecasting

Data Engineering: Apache Spark, Airflow, ETL pipelines, Data warehousing

Databases: PostgreSQL, MySQL, MongoDB, Snowflake

Cloud Platforms: AWS (SageMaker, S3, EC2), Google Cloud Platform

Data Visualization: Tableau, Power BI, Matplotlib, Plotly

MLOps: Docker, Kubernetes, Git, CI/CD pipelines, Model monitoring

Statistical Methods: Hypothesis testing, A/B testing, Bayesian inference, Causal inference
