PROFESSIONAL SUMMARY

I'm a DevOps Engineer with 4 years of hands-on experience building and maintaining cloud infrastructure across AWS and Azure. I've worked on containerisation strategies that reduced deployment times by 60% and implemented monitoring solutions that caught critical issues before they affected users. I enjoy solving infrastructure problems and mentoring junior engineers through complex deployments.

WORK EXPERIENCE

DevOps Engineer

TechVault Solutions, Birmingham, United Kingdom

www.techvault.io

January 2022 - Present

Designed and deployed a Kubernetes cluster supporting 12 microservices, reducing infrastructure costs by 35% through better resource allocation and auto-scaling policies.

Implemented CI/CD pipelines using GitLab and Jenkins that reduced manual deployment time from 2 hours to 15 minutes for the main product releases.

Managed AWS infrastructure including EC2, RDS, and S3 across multiple environments, ensuring 99.8% uptime with documented runbooks for common incidents.

Mentored two junior DevOps engineers on Docker best practices and helped them troubleshoot issues with container networking and storage volumes.

Senior Infrastructure Technician

Digital Forge Ltd, Coventry, United Kingdom

www.digitalforge.co

July 2020 - December 2021

Migrated 40 legacy applications from on-premises servers to AWS, completing the project 2 months ahead of schedule and reducing monthly hosting costs by 45%.

Built Terraform modules for infrastructure-as-code across development, staging, and production environments, reducing manual configuration errors by 80%.

Established centralised monitoring and alerting using Prometheus and Grafana, enabling the team to identify and resolve performance issues 3x faster.

Created comprehensive disaster recovery procedures and tested failover processes quarterly, ensuring business continuity across all critical systems.

Junior DevOps Engineer

DataStream Technologies, Birmingham, United Kingdom

www.datastream.net

September 2019 - June 2020

Supported Docker container deployments and assisted in maintaining a 50-node Kubernetes cluster across staging and production environments.

Wrote bash and Python scripts to automate routine server maintenance tasks, saving approximately 4 hours per week in manual work.

Maintained system logs and helped troubleshoot application performance issues by analysing metrics in CloudWatch and ELK Stack.

Assisted in the planning and execution of infrastructure upgrades, including database migrations and load balancer reconfiguration.

EDUCATION

BSc Computer Science

University of Birmingham, United Kingdom

Graduated: June 2019

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, CloudWatch, VPC, Lambda), Microsoft Azure (VMs, App Service, SQL Database)

Containerisation: Docker, Kubernetes (EKS, AKS), container registry management

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: GitLab CI, Jenkins, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch, Datadog

Scripting: Bash, Python, PowerShell

Networking: TCP/IP, DNS, VPNs, load balancing

Databases: PostgreSQL, MySQL, MongoDB basics

Version Control: Git, GitLab, GitHub

Operating Systems: Linux (Ubuntu, CentOS), Windows Server
