PROFESSIONAL SUMMARY

Data engineer with three years of hands-on experience building and maintaining data pipelines for fast-growing tech companies. I started my career fixing data quality issues and gradually took on more responsibility for designing ETL processes and optimizing warehouse performance. I enjoy working with teams that value clean data architecture and am most productive when solving real problems that directly impact business decisions.

WORK EXPERIENCE

Senior Data Engineer

DataFlow Systems

Amsterdam, Netherlands

dataflowsystems.io

January 2023 - Present

Designed and deployed Apache Airflow DAGs that reduced daily data pipeline execution time from 4 hours to 45 minutes, directly improving reporting SLA compliance by 92%

Implemented automated data quality checks using Great Expectations, catching schema violations and anomalies before they reached production dashboards

Led migration of legacy batch jobs from shell scripts to Python-based workflows, reducing operational overhead and enabling self-service debugging for analytics team

Mentored junior data engineer on SQL optimization techniques and cloud infrastructure best practices on Google Cloud Platform

Data Engineer

Insight Analytics BV

Utrecht, Netherlands

www.insightanalytics.nl

June 2021 - December 2022

Built and maintained 15+ Snowflake data marts supporting marketing, finance, and product teams with daily refresh cycles

Created 40 dbt models across the transform layer, establishing documentation standards and version control practices that improved code review quality

Resolved production data pipeline failures by implementing comprehensive monitoring with Datadog and establishing incident response runbooks

Optimized slow-running SQL queries in Redshift, achieving 70% improvement in query performance for the customer analytics dashboard

Junior Data Engineer

TechStart Solutions

Amsterdam, Netherlands

techstartsolutions.net

August 2020 - May 2021

Extracted data from 12 different APIs and third-party platforms using Python, loading into PostgreSQL with automated error handling and retry logic

Built initial dbt project structure including staging models and business logic layer, establishing reusable patterns for transformations

Supported data warehouse schema design meetings by analyzing requirements and proposing normalization approaches

Documented ETL processes and maintained runbooks that reduced time to resolve pipeline issues by 50%

EDUCATION

Bachelor of Science in Computer Science

University of Amsterdam

Amsterdam, Netherlands

Graduated June 2020

TECHNICAL SKILLS

Languages and Frameworks: Python, SQL, dbt, Bash

Data Platforms and Warehouses: Snowflake, Redshift, Google Cloud Platform BigQuery, PostgreSQL

Orchestration and Workflow: Apache Airflow, cron scheduling

Data Quality and Testing: Great Expectations, dbt tests, custom Python validators

Tools and Services: Git, Datadog, Docker, Linux, Jira

Cloud Services: Google Cloud Storage, AWS S3, Compute Engine
