PROFESSIONAL SUMMARY

I'm a DevOps engineer with 6 years of hands-on experience building and maintaining cloud infrastructure, primarily on AWS. I've spent the last three years leading infrastructure projects at growing fintech companies, where I've designed systems that handle millions of transactions daily. I enjoy solving operational problems through automation and mentoring junior engineers on deployment practices.

CORE TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, CloudFormation, Lambda), Azure basics

Infrastructure as Code: Terraform, CloudFormation, Ansible

Containerization: Docker, Kubernetes, Helm

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Programming Languages: Python, Bash, Go

Databases: PostgreSQL, MySQL, MongoDB

Version Control: Git, GitHub, GitLab

Operating Systems: Linux (CentOS, Ubuntu), macOS

WORK EXPERIENCE

Senior DevOps Engineer

FinVault Systems, Leeds

www.finvault.io

January 2022 - Present

Architected and deployed a Kubernetes cluster supporting 15+ microservices handling 2 million daily transactions with 99.95% uptime SLA compliance. Reduced infrastructure costs by 35% through reserved instance optimization and implementing auto-scaling policies across production environments. Implemented comprehensive monitoring using Prometheus and Grafana, reducing mean time to detection of critical issues from 20 minutes to under 5 minutes. Mentored 3 junior DevOps engineers on infrastructure best practices, code review processes, and disaster recovery procedures.

DevOps Engineer

CloudScale Networks, Manchester

www.cloudscale.net

June 2019 - December 2021

Designed and maintained AWS infrastructure supporting 50+ applications across development, staging, and production environments using Terraform and CloudFormation. Built CI/CD pipelines using GitLab CI that reduced deployment times from 45 minutes to 12 minutes, enabling 8 deployments per day safely. Implemented centralized logging with ELK Stack processing 500GB of logs daily, improving debugging time for development teams by 60%. Established disaster recovery procedures including automated backup systems and failover testing, resulting in

zero data loss incidents.

DevOps Specialist

DataStream Ltd, Leeds

www.datastream.co

August 2018 - May 2019

Containerized legacy monolithic applications using Docker and migrated them to a newly deployed Kubernetes cluster, improving deployment consistency and reducing environment-related bugs by 45%. Automated server provisioning and configuration management using Ansible, reducing manual setup time from 4 hours to 15 minutes per new instance. Created Python scripts for infrastructure monitoring and automated incident response, handling 80% of common alerts without human intervention. Supported development teams through on-call rotation and incident management, maintaining SLA targets of 99.5% availability.

EDUCATION

University of Leeds

BSc Computer Science

2015 - 2018

CERTIFICATIONS AND TRAINING

AWS Certified Solutions Architect Professional (2023)

Kubernetes Application Developer (CKAD) (2021)

GITHUB REPOSITORIES

github.com/jamesmitchell/terraform-aws-vpc-automation - Complete VCS module with multi-region failover capabilities

github.com/jamesmitchell/kubernetes-helm-charts - Production-ready Helm charts for common microservices
