PROFESSIONAL SUMMARY

I'm a data scientist with four years of hands-on experience building predictive models and analyzing large datasets for fintech and e-commerce companies. I spend most of my time bridging the gap between messy real-world data and actionable insights, working closely with engineers and business stakeholders. I'm comfortable with the entire pipeline from data extraction through model deployment, and I prefer working with Python and SQL on problems where the business impact is clear and measurable.

WORK EXPERIENCE

Senior Data Scientist

DataVault Analytics

Zurich, Switzerland

<https://datavault-analytics.io>

March 2023 - Present

Developed a customer churn prediction model using gradient boosting that identified 12% of at-risk accounts with 78% precision, leading to targeted retention campaigns worth 1.2 million CHF in retained revenue. Built an automated ETL pipeline processing 500GB of transaction data daily using Python and Apache Spark, reducing manual reporting time by 18 hours per week. Created interactive dashboards in Tableau tracking KPIs for credit risk assessment across 50+ partner institutions, used by executives for quarterly strategic planning. Mentored two junior analysts on statistical methods and best practices in feature engineering, reviewing their work and providing feedback on model validation approaches.

Data Scientist

FinFlow Markets AG

Zurich, Switzerland

<https://www.finflow.ch>

September 2021 - February 2023

Led the development of a market impact prediction model for algorithmic trading using LSTM neural networks, achieving 3.2% mean absolute percentage error on volatile forex pairs. Conducted exploratory data analysis on 18 months of tick-level market data to identify patterns in client trading behavior, resulting in recommendations adopted by the trading desk. Implemented A/B testing framework in Python to validate hypotheses about feature importance, running 25+ experiments that improved model performance by 8.5%. Collaborated with the DevOps team to deploy machine learning models into production using Docker and implemented monitoring to track model drift on incoming data.

Data Analyst

SalesBoost Digital GmbH

Zurich, Switzerland

<https://salesboost-digital.net>

June 2020 - August 2021

Analyzed user behavior data from 2 million e-commerce customers using SQL and Python to identify high-value segments, increasing marketing campaign ROI by 23%. Built predictive models for product recommendation engine using collaborative filtering, which increased average order value by 4.7% across the platform. Performed statistical tests to measure the significance of A/B test results in real-time, providing daily reports to the product team on conversion rate changes. Cleaned and prepared datasets from multiple sources including web logs, CRM systems, and payment processors, documenting data quality issues and establishing standards for future ingestion.

EDUCATION

Master of Science in Data Science

ETH Zurich (Swiss Federal Institute of Technology Zurich)

Zurich, Switzerland

2018 - 2020

Bachelor of Science in Mathematics

University of Zurich

Zurich, Switzerland

2014 - 2018

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Scala

Data Analysis and Visualization: Pandas, NumPy, Matplotlib, Seaborn, Tableau, Apache Spark

Machine Learning: Scikit-learn, XGBoost, LightGBM, TensorFlow, Keras, PyTorch, LSTM

Databases: PostgreSQL, MySQL, MongoDB, Redshift

Tools and Platforms: Jupyter Notebook, Git, Docker, Apache Airflow, AWS (S3, EC2, SageMaker)

Statistical Methods: Regression analysis, hypothesis testing, time series analysis, A/B testing

LANGUAGES

German (Native)

English (Fluent)

French (Intermediate)
