PROFESSIONAL SUMMARY

I'm a data analyst with seven years of hands-on experience building dashboards, automating reporting processes, and extracting actionable insights from messy datasets. I've worked across finance, healthcare, and e-commerce sectors in Zurich, helping teams move away from manual spreadsheet work and toward data-driven decision making. I'm particularly skilled at SQL and Python, and I genuinely enjoy the problem-solving aspect of transforming raw data into something stakeholders can actually use.

WORK EXPERIENCE

Senior Data Analyst

DataViz Solutions GmbH

Zurich, Switzerland

datavizsolutions.io

March 2022 - Present

Designed and maintained 15 production dashboards in Tableau and Power BI that serve 200+ internal and external users across multiple departments, reducing report generation time from 8 hours to 15 minutes weekly.

Led the migration of legacy reporting infrastructure from Excel to a centralized PostgreSQL database, eliminating manual data entry errors and improving data freshness from monthly to daily updates.

Mentored two junior analysts on SQL optimization techniques and data visualization best practices, resulting in improved query performance across the analytics team's portfolio.

Developed Python scripts for ETL pipeline automation that process 50 million records daily, decreasing data processing overhead by 40 percent and freeing up 10 hours per week for strategic analysis.

Data Analyst

MediCare Analytics AG

<https://www.medicare.ch>

Zurich, Switzerland

August 2019 - February 2022

Built and automated monthly KPI reports for the executive team using SQL and Tableau, covering patient outcomes, operational efficiency, and financial metrics across 12 hospital locations.

Performed statistical analysis on clinical trial datasets using Python and R, identifying significant correlations that influenced treatment protocol recommendations adopted by 8 clinical departments.

Collaborated with the IT infrastructure team to design a data warehouse schema that consolidated data from five disparate source systems, improving data accessibility for 45 analysts and researchers.

Created data quality frameworks and validation checks that caught and prevented 340+ erroneous records from entering production systems, maintaining data integrity standards above 99.8 percent.

Mid-Level Data Analyst

eShop Commerce Ltd

<https://www.eshopcommerce.net>

Zurich, Switzerland

June 2017 - July 2019

Analyzed customer behavior patterns from e-commerce transaction logs using SQL and Tableau, producing insights that influenced product pricing strategy and increased average order value by 12 percent.

Designed and implemented automated alerts for anomalous transactions and data quality issues using Python scripts, reducing manual monitoring workload by 60 percent.

Conducted A/B testing analysis on website redesigns and promotional campaigns, delivering statistical significance reports that helped marketing teams optimize conversion rates.

Maintained and updated 8 daily and weekly business intelligence reports, ensuring accuracy and timeliness for finance, marketing, and operations stakeholders.

EDUCATION

Bachelor of Science in Applied Mathematics

Swiss Federal Institute of Technology Zurich (ETH Zurich)

Zurich, Switzerland

Graduated: June 2017

TECHNICAL SKILLS

Languages and Databases: SQL, Python, R, PostgreSQL, MySQL, BigQuery, Excel VBA

Visualization and BI Tools: Tableau, Power BI, Looker, Matplotlib, Seaborn

Data Processing: Pandas, NumPy, Apache Spark, ETL design, data pipeline automation

Tools and Platforms: Git, Jupyter Notebooks, Linux command line, Airflow, Google Analytics

Statistical Methods: Hypothesis testing, A/B testing, regression analysis, data quality assessment

CERTIFICATIONS

Tableau Desktop Specialist Certification, 2021

Google Analytics Individual Qualification, 2019

LANGUAGES

German (Native)

English (Fluent)

French (Intermediate)
