PROFESSIONAL SUMMARY

Staff Engineer with 7 years of backend and infrastructure experience, primarily working with distributed systems and cloud technologies. I've spent the last few years leading technical decisions on critical systems that handle millions of requests daily. I genuinely enjoy mentoring junior engineers and helping teams move past architectural bottlenecks. Based in Madrid, actively seeking roles where I can influence both code and strategy.

WORK EXPERIENCE

Staff Engineer

TechVision Labs

techvisionlabs.io

Madrid, Spain

August 2022 - Present

Led the redesign of our payment processing pipeline, reducing latency by 62 percent and increasing throughput from 500 to 2100 transactions per second through careful database optimization and service decomposition.

Mentored 5 junior engineers on system design principles and code review practices, with 3 of them promoted to mid-level positions within the evaluation period.

Designed and implemented a comprehensive observability strategy across 40 microservices using Prometheus, Grafana, and custom log aggregation, dramatically improving incident response time from 45 minutes to 12 minutes average.

Collaborated with product leadership on technical roadmap planning, breaking down complex requirements into achievable quarterly milestones while managing technical debt systematically.

Senior Backend Engineer

DataFlow Systems

dataflowsystems.net

Madrid, Spain

March 2020 - July 2022

Architected a real-time data processing system in Kafka and Spark that ingested 500 million events daily, serving as the backbone for 15 downstream analytics services used across the company.

Reduced infrastructure costs by 38 percent over 18 months through strategic use of spot instances, auto-scaling policies, and careful right-sizing of compute resources without compromising performance.

Established Go as our primary backend language and built foundational libraries for logging, metrics, and service communication that accelerated development velocity for 8 teams.

Responded to critical production incidents with structured incident response protocols, conducting thorough postmortems that prevented recurrence and built institutional knowledge across teams.

Backend Engineer

Digital Solutions Ibérica

www.digitalsolutionsiberica.com

Madrid, Spain

January 2018 - February 2020

Developed REST APIs in Python and Java that powered mobile and web applications serving 2 million monthly active users, maintaining 99.8 percent uptime through careful monitoring and graceful degradation patterns.

Migrated legacy monolithic application to a microservices architecture on Kubernetes, improving deployment frequency from quarterly to daily while reducing blast radius of failures.

Implemented distributed tracing with Jaeger and centralized logging with ELK stack, providing visibility into system behavior that helped identify and fix performance regressions early.

Participated in on-call rotation, handling production incidents, writing patches, and improving system resilience based on recurring issues identified during emergency responses.

EDUCATION

Bachelor of Science in Computer Science

Universidad Politécnica de Madrid

Madrid, Spain

2014 - 2018

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, Bash

Databases and Storage: PostgreSQL, MongoDB, Redis, Elasticsearch, Apache Cassandra

Cloud and Infrastructure: AWS (EC2, RDS, S3, Lambda, CloudWatch), Kubernetes, Docker, Terraform

Distributed Systems: Kafka, Apache Spark, gRPC, Protocol Buffers, RabbitMQ

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Jaeger, DataDog

Frameworks and Tools: Spring Boot, Django, Gin, Apache Airflow, Git
