Location: Berlin, Germany

PROFESSIONAL SUMMARY

I'm a data scientist with 7 years of hands-on experience building machine learning systems that solve real business problems. I've spent the last few years leading data science initiatives at growing tech companies, mentoring junior team members, and shipping models to production that actually impact revenue. I'm most comfortable working with large datasets, statistical modeling, and translating business questions into analytical frameworks.

WORK EXPERIENCE

Senior Data Scientist

Insight Analytics GmbH, www.insightanalytics.io

Berlin, Germany

March 2022 - Present

Led the development and deployment of a customer churn prediction model that reduced customer attrition by 18% in the first year, generating 2.3 million euros in retained revenue.

Built an automated data pipeline processing 500GB of customer behavior data daily using Apache Spark and Python, reducing manual data preparation time by 75%.

Mentored a team of 3 junior data scientists on statistical best practices, model validation techniques, and code review standards across all modeling projects.

Established a framework for A/B testing across the company, enabling product teams to make data-driven decisions on feature releases and achieving a 22% improvement in experiment statistical power.

Data Scientist

TechVenture Solutions, www.techventure.net

Berlin, Germany

June 2019 - February 2022

Developed recommendation algorithms for personalized product suggestions that increased average order value by 12% and drove 8% growth in repeat purchases within 6 months.

Created a real-time demand forecasting model using LSTM neural networks to optimize inventory levels across 15 warehouse locations, reducing holding costs by 2.1 million euros annually.

Automated the monthly reporting process by building Python scripts and SQL queries that consolidated data from 8 different sources, saving the analytics team 40 hours of manual work each month.

Collaborated with the engineering team to productionize 4 machine learning models, implementing monitoring dashboards and alert systems to track model performance drift in production.

Junior Data Scientist

DataCore Solutions, www.datacore.co

Berlin, Germany

September 2017 - May 2019

Analyzed customer segmentation data using clustering algorithms and statistical testing to identify high-value customer groups, enabling targeted marketing campaigns that increased conversion rates by 15%.

Built exploratory data analysis dashboards in Tableau and Python to support executive decision-making on strategic partnerships and market expansion opportunities.

Cleaned and validated datasets containing 50 million+ records, documenting data quality issues and implementing automated validation checks to prevent future data inconsistencies.

Participated in the end-to-end development of a customer lifetime value prediction model, handling everything from feature engineering to model evaluation and stakeholder presentations.

EDUCATION

Diploma in Statistics and Data Analysis

Humboldt University of Berlin

Berlin, Germany

Graduated: 2017

SKILLS

Programming Languages: Python, R, SQL, Scala

Machine Learning: Supervised learning, unsupervised learning, neural networks, ensemble methods, time series forecasting, NLP

Data Tools and Platforms: Apache Spark, Pandas, Scikit-learn, TensorFlow, Keras, XGBoost, LightGBM

Data Visualization: Tableau, Matplotlib, Seaborn, Plotly

Databases: PostgreSQL, MySQL, MongoDB, Redshift

Big Data: Hadoop, Apache Spark, AWS EMR

Statistics: Hypothesis testing, regression analysis, Bayesian methods, experimental design

Version Control: Git, GitHub, GitLab

Cloud Platforms: AWS, Google Cloud Platform
