PROFESSIONAL SUMMARY

Backend engineer with 5 years of experience building scalable APIs and microservices. I've spent the last few years working with Python and Node.js in fast-paced startups and established tech companies. I enjoy solving problems related to data pipelines and system architecture, and I'm comfortable working with both relational and NoSQL databases. Looking to take on more responsibility in system design decisions.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Frameworks: Django, FastAPI, Express.js, Flask

Databases: PostgreSQL, MongoDB, Redis, MySQL

Tools and Services: Docker, AWS, Git, Celery, RabbitMQ

Other: REST APIs, Microservices, CI/CD pipelines, Linux, Kubernetes basics

WORK EXPERIENCE

Senior Backend Engineer

Velocity Labs

www.velocitylabs.io

Lisbon, Portugal

February 2023 - Present

Designed and implemented a real-time data ingestion pipeline that processes 50 million events daily using Python and Celery, reducing latency by 40 percent

Led the migration of a monolithic Django application to microservices architecture using Docker and Kubernetes, improving deployment frequency from monthly to daily

Mentored two junior developers on API design patterns and code review best practices, resulting in fewer production bugs and better code quality

Optimized database queries across multiple services, bringing average response times from 800ms to 150ms through strategic indexing and query refactoring

Backend Engineer

Nexus Digital

www.nexusdigital.co

Lisbon, Portugal

July 2021 - January 2023

Built and maintained five RESTful APIs serving 2 million monthly active users, handling authentication, payment processing, and user management

Implemented automated testing suite using pytest that achieved 82 percent code coverage, catching approximately 30 percent more bugs before production

Integrated third-party services including Stripe, SendGrid, and Twilio into the platform, enabling new revenue streams and improving customer engagement

Reduced server costs by 35 percent through optimization of AWS infrastructure, eliminating unused resources and right-sizing EC2 instances

Junior Backend Engineer

TechFlow Solutions

www.techflowsolutions.net

Porto, Portugal

June 2019 - June 2021

Developed backend features for a SaaS product using Django and PostgreSQL, contributing to the core user management and billing systems

Wrote database migrations and SQL queries for schema changes, ensuring zero downtime deployments for a user base of 500,000 accounts

Debugged and resolved production incidents on a rotating on-call schedule, maintaining 99.5 percent uptime for critical services

Participated in code reviews and contributed to team documentation, helping establish patterns that were adopted across the engineering team

EDUCATION

Bachelor of Science in Computer Science

Instituto Superior Técnico

Lisbon, Portugal

2015 - 2019

GITHUB REPOSITORIES

github.com/joaomartins92/fastapi-ecommerce - E-commerce API built with FastAPI, SQLAlchemy, and PostgreSQL. Includes JWT authentication, product management, and order processing.

github.com/joaomartins92/task-queue-worker - Distributed task queue system using Redis, Celery, and Python. Handles background job processing with retry logic and monitoring.

github.com/joaomartins92/data-pipeline-etl - ETL pipeline for processing CSV files and syncing data to PostgreSQL. Includes validation, error handling, and logging.

github.com/joaomartins92/node-api-boilerplate - Boilerplate Express.js API with authentication, middleware, database connection pooling, and Docker setup.
